2.0 OVERVIEW

2.1 Specifications

Official Name	Ocelot Odyssey
Genre	Puzzle Platformer, Exploration,
Theme	Jungle Adventure, Ocelot, Exploration, Mirrors
Camera Perspective	Third Person, Free Camera View
Game Engine	Unreal Engine v5.4.3
Type	3D
Age Rating	9+
Target Audience	Kids/Teens (10-15)
Platforms	PC
Players	Single-Player

2.2 Elevator Pitch

Unleash your inner wild jungle cat, and play as a LITERAL wild jungle cat, adventuring off

through into the wilderness, overcoming tests of the mind, and ultimately.. discover these temple's long forgotten secrets...

2.3 Game Concept

Play as a whip-cracking, meow-yapping, adventurous amputee cat in this 3D puzzle platformer. Sets forth into an ancient ruin temple to discover its secrets.

2.4 Unique Selling Points

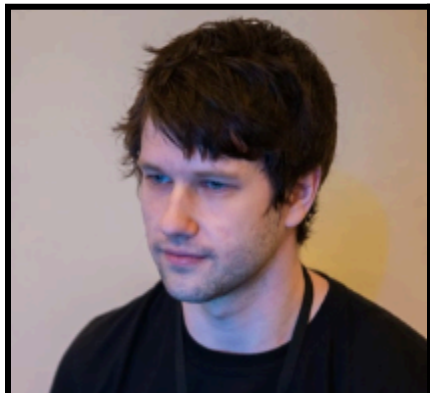

- ❖ Play as an amputee animal which is rarely seen in the medium.
- ❖ Taps into the growing demography of 'furries'. Big market appeal is there.
- ❖ Many gamers will get to hear an ocelot's unique growling for the first time.
- ❖ Brings an immersive and fun jungle puzzle adventure from the comfort of your own home, that the whole family can enjoy!

2.5 Demographic

Ocelot Odyssey's main target demographic is 9-15 year old kids/teens with a casual to mid-range skill level and will aim to be family friendly, and be a game that the whole family can enjoy, regardless of age. The game will also aim to appeal and market the game towards a constantly growing market of 'furries'.

Persona Profile Examples -

Profile A | The Platformer Fan

Name: Benjamin

Age: 29

Location: Melbourne, Australia

Occupation: University Student, Twitch Streamer, Speedrunner

Demography: <insert text>

Preferences: <insert text>

Gaming Skill Level: Advanced

Other Video Games Liked: Super Monkey Ball, Legend of Zelda, Baba Is You, The Witness

Income Tier Bracket: \$15k-\$20k Annually

Profile Summary: Benjamin is a cool old guy.

Profile B | The Adventurer Gamer

Name: Jaedon

Age: 11

Location: Michigan, United States

Occupation: Student, Furry

Demography: <insert text>

Preferences: <insert text>

Gaming Skill Level: Casual

Other Video Games Liked: Lego Indiana Jones, Lego Star Wars, Minecraft, Skylanders

Income Tier Bracket: \$0-\$70 Monthly Allowance

Profile Summary: Jaedon is a young student who is looking for an adventure outside of the boring norm of his school and home life. He loves animals and especially dressing up as one and creating all sorts of stories about them. He would love a game that he could share and get his whole family and friends into.

2.6 Game Inspirations

Animal Jam Adventures

- ❖ Mirror Puzzle Mechanic (Rotating on 4 different angles)
- ❖ Mirror sunbeam being used to open a door
- ❖ Family friendly cartoonish stone temple art style & aesthetic
- ❖ Light-hearted but very fun adventures with exploration and puzzles
- ❖ Destructive vines that obstruct the Player
- ❖ Plants and nature as enemies

A Hat In Time

- ❖ Third-Person Perspective
- ❖ Movement Controls, allowing for satisfying parkour and exploration gameplay
- ❖ Cartoonish 3d art style and aesthetic

Night Stones

- ❖ Low Poly Cartoonish Art Aesthetic & Style
- ❖ Pressure Plate Puzzle Mechanic
- ❖ Making good use of the environment for creating puzzles

Stray

- ❖ CAT as main character

Indiana Jones

- ❖ High stakes jungle temple adventure
- ❖ The ocelot's outfit (hat and tail whip)
- ❖ The rolling boulder
- ❖ Inspired the game's overall theme

3.0 GAMEPLAY

3.1 Objectives

The Player's main objectives are:

- ❖ Figure out how to solve the puzzles and open the door
- ❖ Survive the obstacles within the level
- ❖ Try to maintain their hearts
- ❖ FIND THE TREASURE

Win/Lose Conditions

You can *win* each level by opening the door and successfully completing the puzzles **ALIVE**.

You can *lose* the game by losing all three hearts.

When the Player has completed all of the levels in the game & successfully completed all of the puzzles, the game is finished and the player has reached the end, and claimed their treasure.

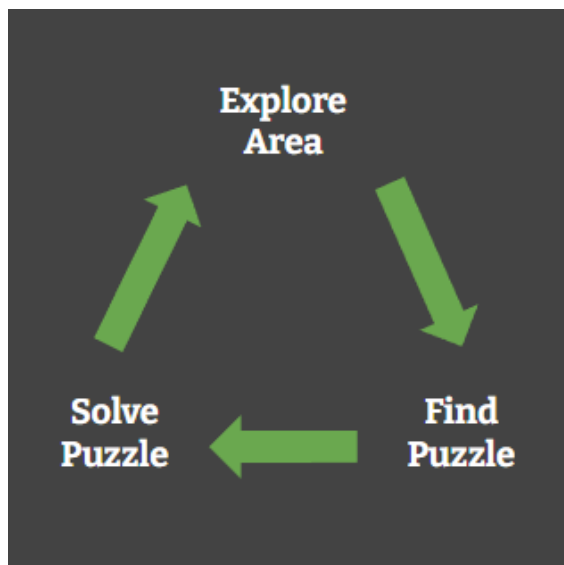

3.2 Game Progression

In Ocelot Odyssey, Players will progress linearly through levels.

The Player will find themselves first within the tutorial area, which will introduce them to all the mechanics of the game, and then they will be thrust into the main area which would be considered their first level.

3.3 Gameplay Loops

Core Gameplay Loop

[Insert moment to moment gameplay loop here]

[Insert level loop here]

3.4 Player Experience

The main motivators for the Player to progress through the levels, is the prospect of overcoming a challenge, and that at the end of the game, treasure awaits them.

The fun factor of the game comes from the satisfaction of feeling clever, and overcoming the challenges that they are faced with, and solving the puzzles of each level or successfully platforming to the next area.

4.0 MECHANICS

4.1 Movement

The player is able to move freely in various different directions, and can move both horizontally/vertically and diagonally in each direction.

Types of movement the players can do are:

Walk

Default movement. Move in any direction (forward, backwards, left and right) horizontally, vertically, and diagonally at a walking speed.

Sprint

Walk Movement except a faster running speed. There is no cooldown for this.

Jump

The cat character the player controls jumps up, and is then pulled down by gravity.

Double Jump

A second jump can be made while the player is in the air or has jumped once already.

4.2 Player Abilities

Tail Whip

The Tail Whip is the Player Character's main ability, it will make use of the Ocelot's tail whip attached to the end of its tail, and function similarly to a real whip, however this one can be cleverly used to attach or move something.

Tail Whip is Used in:

Destroying Vines

The Player is able to destroy vines obstructing their path by whipping at it with their tail.

Rotate Mirrors

The Player is able to rotate the mirrors with their tail whip.

Cat Push & Pull

The Player is able to push interactable objects, in the direction they are facing, using their big strong cat muscles.

The Player is able to pull interactable objects, in any direction, using their big strong cat teeth muscles.

Pull Levers

The Player is able to pull on levers by pressing E near it. These levers typically switch off fire traps.

4.3 Collectible Mirror Shards

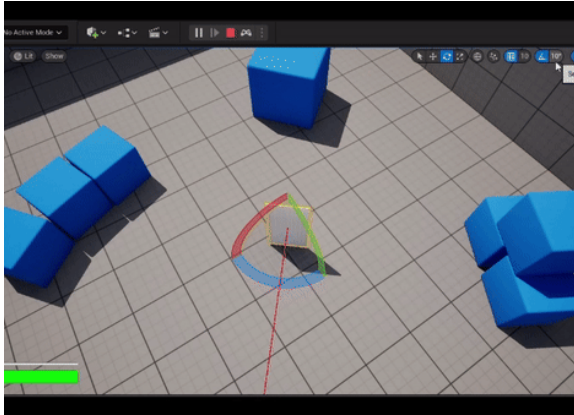

The Player may stumble upon some broken mirrors, which are unusable until they are fixed. The Player can fix these mirrors by collecting mirror shards, scattered across the level. Three mirror shards usually does the trick to fixing these mirrors, but the amount may vary.

Each time the player-character dies, a pouch spawns in place on the spot where the player lost a life.

When the Player revisits where the pouch was dropped, they pick up their shards again.

4.4 Mirrors & Sunbeams

A sunbeam will be seen shining light from a statue on each level. These sunbeams open the door to the next area, but in order for them to be correctly oriented towards the door, the sunbeam must be angled via Mirrors. Mirrors within the game can be rotated a complete 360 degrees, but only in 4 different 90 degree angles. This mechanic acts as our main mechanic and win condition for the game.

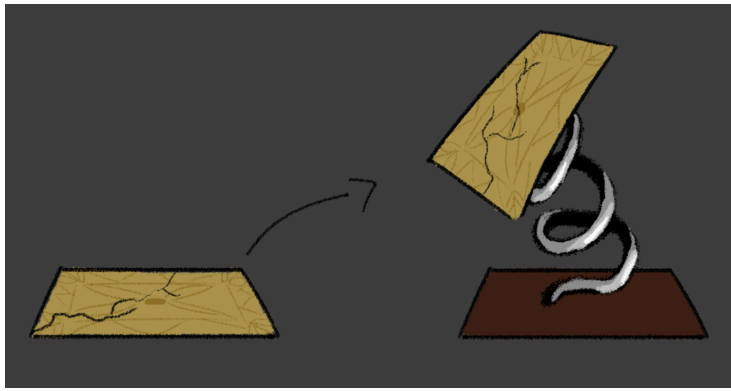

4.5 Pressure Plates

Pressure Plates are interactable elevated floor tiles that the Player, or an object can stand on to move walls which may be blocking mirror light beams, or may be useful for parkour purposes.. As long as something is placed on the pressure plate, the wall will stay in its moved position, otherwise it will return back to its original place.

4.6 Traps

Spring Loaded Traps (STRETCH GOAL)

Spring-Loaded Traps are a type of floor trap the Player must avoid. These traps appear normal with only a slight crack as an indication that it is there. If the Player steps on this, the Player's character will get ragdolled and splat into a water or wall as a pancake splat.

Fire Vent Traps

Fire Vent Traps are a type of floor trap the Player must avoid. Fire will come out of vents in timed intervals and if the Player is standing on it when fire comes out of it, they will lose a heart.

Fire Blower Traps

Fire Blowers are a type of wall trap the Player must avoid. Fire will come out of a hole in the wall in one of two variations- timed intervals, or consistently, needing a lever to be turned off.

4.7 Hazards

Rolling Boulder (STRETCH GOAL)

A rolling boulder will be present rolling down at fast speeds steep cliffs or holes in walls that the Player may encounter. If the Player comes in contact with a boulder, they lose a heart.

Water

Water will be present within most of the levels. If the Player's character touches the water, they get respawned and lose their collected shards (shard pouch appears in the closest playable area to where Player dies), and lose a life.

Obstructive Vines

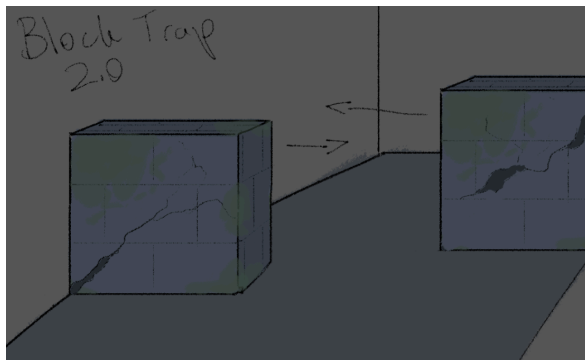

These vines will block the Player's path, and hide vital objects or areas from the Player. The Player can get rid of these by using their Tail Whip ability.

Moving Platforms

These platforms will move either left and right or up and down. mistiming jumping onto these may cause the Player to fall into the water or lose their parkour progress.

Moving Walls

These blocks will protrude out of walls, either blocking the Player's path or becoming a platform to which the Player can use to parkour around the level with. These walls need pressure plate/s to move.

4.8 Player Health

Players have three hearts (or lives) in total. Each time the Player is damaged they lose a heart. If they lose all three hearts, the Player is respawned back at the starting point of the level, and their lives are replenished.

5.0 STORY AND SETTING

5.1 Synopsis

An ocelot goes on an adventure in an ancient Amazon temple and discovers an intriguing mystery.

The game concludes with Ollie discovering a phantasm figure which rises from the treasure he earns. The game ends on a cliffhanger at that note.

5.2 Setting

In 2024, NASA declared that the sun was going through 'solar maximum' where space storms and geomagnetic turbulence would impact Earth's magnetosphere. In 2025, an X-class solar flare struck regions of the southern hemisphere. Reports soon followed after that certain animals were behaving differently. Pets were seemingly more lucid, more humanely interfacing with their humans, especially in behaviour imitations. In petting zoos, parrots started speaking in a more sophisticated speech. In the wild, tigers and elephants began to collaborate in taking down poachers.

After a worldwide forum and meeting with world leaders, astrobiologists and epigeneticists came to the agreement that the solar radiation triggered latent epigenetics in animal genomes, which has led to a certain number of animals becoming smarter in a matter of weeks. In this world, the event has since been classified as '*Mahavira's Sunstorm*', named after the famed monkey warrior from ancient mythos in India and China, who was said to have been sentient like humans.

Cultural and political peripheries have followed *Mahavira's Sunstorm*. Cults have been started, revolving around the worship of the specific animals who have evolved in a matter of weeks,

younger generations have taken to mass protests with government scientific research in kidnapping the 'gifted' animals for classified research, at the pop culture side of things - new Netflix shows have been greenlit around this new world development. Someone even made a crypto-coin currency about them. Furies have become empowered and are now running their own political parties at elections.

In our game, a mostly undiscovered ocelot treks into the Amazon forest for adventure.

NEW VERSION - tweaked for them iPad kids

In the year 2025, a huge space event, called the **Mahavira's Sunstorm**, happened when a special kind of sunbeam (scientists called it an X-Class Solar Flare) sent extra energy towards Earth! This powerful sunburst didn't just create colourful lights in the sky; it made animals all around the world *extra smart*. From parrots saying things they never could before, to dolphins helping people solve mysteries, animals began thinking, talking, and even teaming up to help protect nature!

One curious little ocelot, **Ollie**, felt a strong pull to explore after the Sunstorm. In the deep Amazon jungle, stories began to swirl about ancient temples and treasures thought to be hidden for centuries. Legends told of an **old temple** with magical stones that could give animals even more incredible abilities, helping them protect the forest and their friends. Inspired, Ollie decided he'd be the one to discover this legendary place and see if the magic was real!

So, Ollie set off on an adventure! Through winding trails, tall trees, and sparkling rivers, he's on a journey to find the ancient temple and uncover the secrets of Mahavira's Sunstorm. Along the way, he'll solve puzzles, dodge sneaky traps, and learn more about the animals who live in the Amazon. Will he find the magic stones and bring their powers back to protect his friends? Join Ollie to find out and become a hero of the Amazon jungle!

5.3 Characters

Player Character - *Ollie the Adventurous Ocelot*

Meet Ollie.

After being nearly left for dead from the machinery of deforestation at the Amazon, a fisherman found a kitten Ollie slipping away from life by a riverbank. Taken to a nearby vet, he was revived and spent months there in recuperation. While recuperating, the local veterinarian would leave a TV running in the background in Ollie's patient room - sometimes playing the news. Sometimes playing movies. One movie that was playing a lot was *Adventurer Jones*, which came to influence Ollie's style of persona, leading him to become the adventurer

he is now. *Mahavira's Sunstorm* struck while he was recuperating at the vet.

6.0 ART STYLE & AESTHETIC

The overall artstyle and aesthetic of Ocelot Odyssey will be a tropical jungle environment, inside a post-apocalyptic and very much ruined temple. Built structures and architecture will maintain an almost prehistoric and post apocalyptic vibe and be intertwined with nature.

It will contain stylised, low poly 3d assets that take on a bit of cartoonish style to appeal to a younger audience.

7.1.4 Second Floor

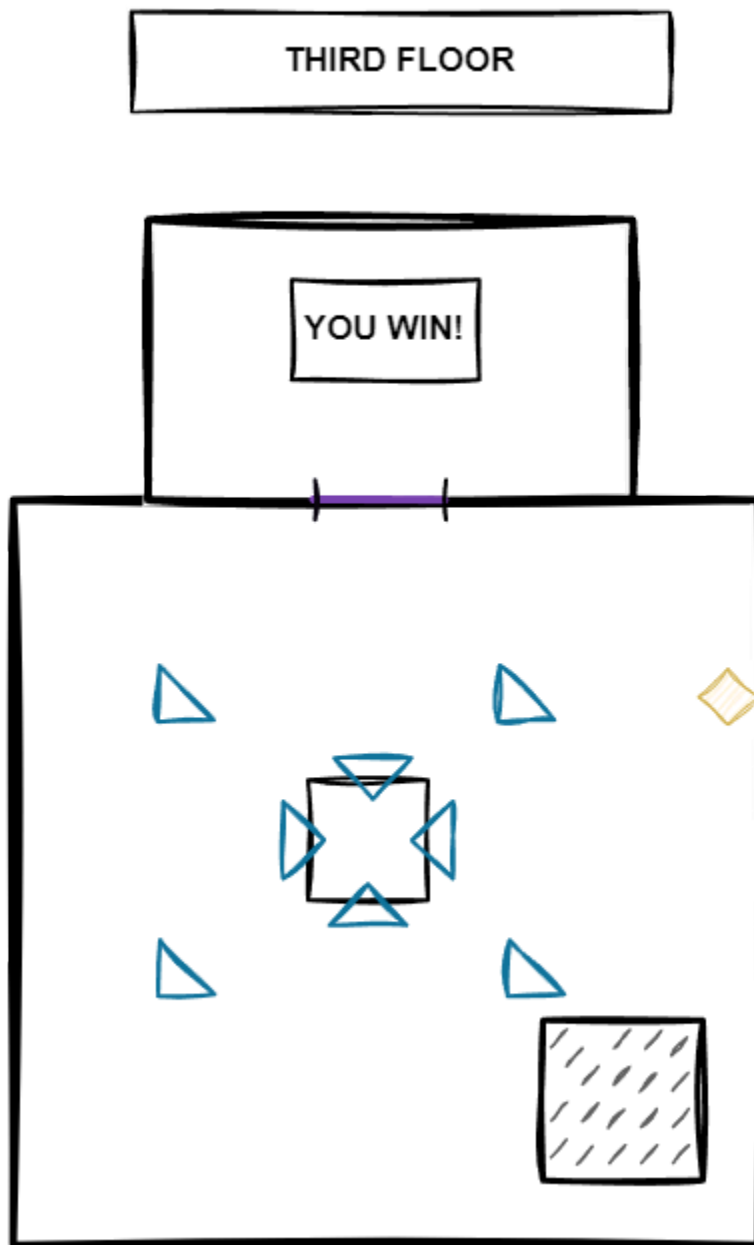

SECOND FLOOR (LOWER)

SECOND FLOOR (TOP)

7.1.5 Third Floor

7.2 Glyphs

Aztec fonts (retrieved from a public domain licence) are used to give a symbology guideline to players, who will learn instinctively which glyph means what as they play.

Exit Goal

This symbol is inputted with '%' to make for that appearance when Aztec is selected. Its design intention is to catch player attention of their goal exit of the area. (Hex sRGB colour is **FF7B36FF** / Linear is **FF320AFF**)

Starter Mirror

The above symbol is inputted with '9'. Its design intention is to guide beginner play experience, that this is your starting mirror (for instances where the correct rotation isn't set). Hex linear code is **06FF00FF**.

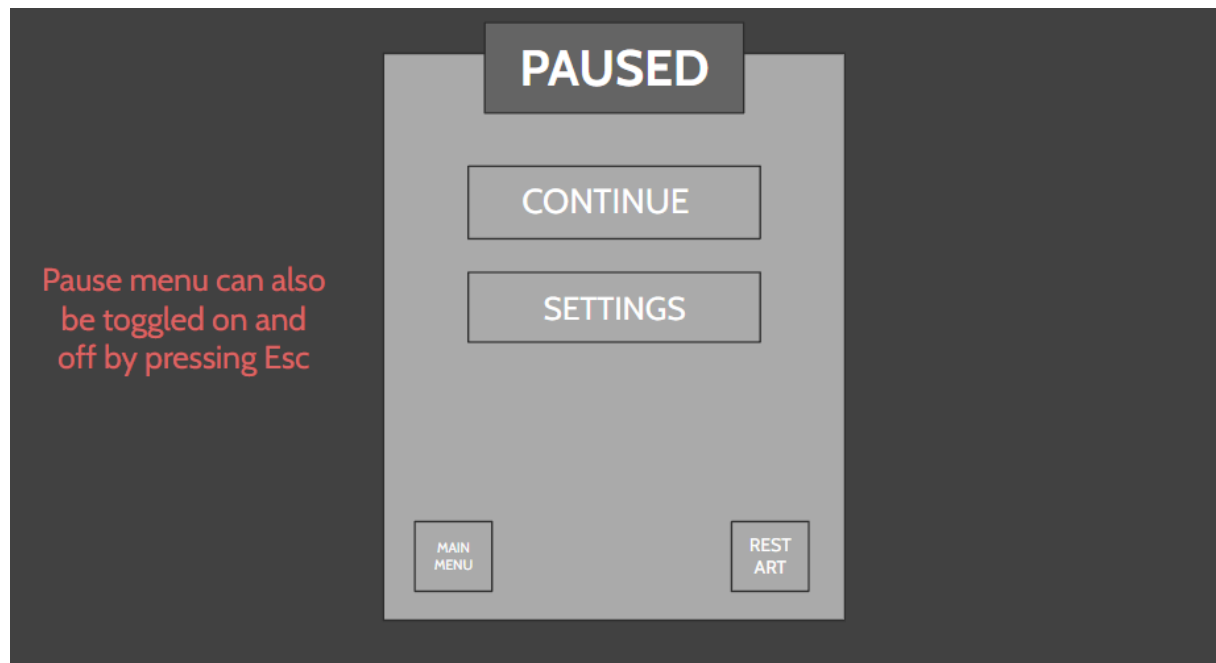

8.0 INTERFACE

8.1 Menus

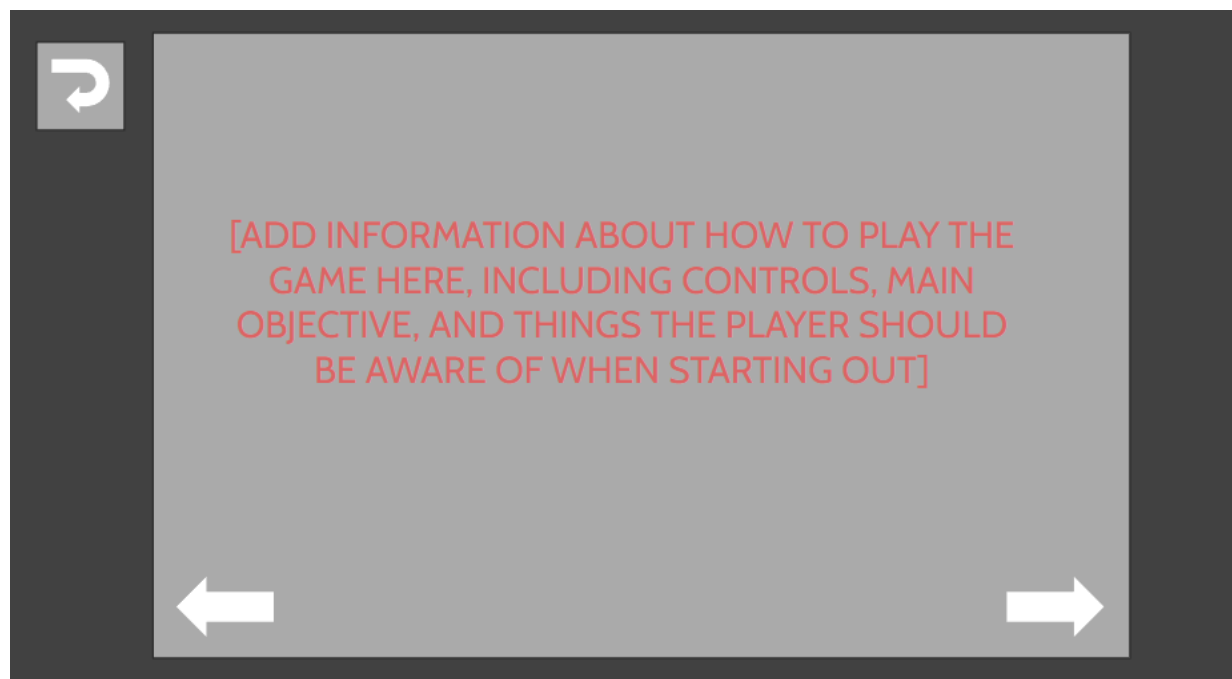

Main Menu

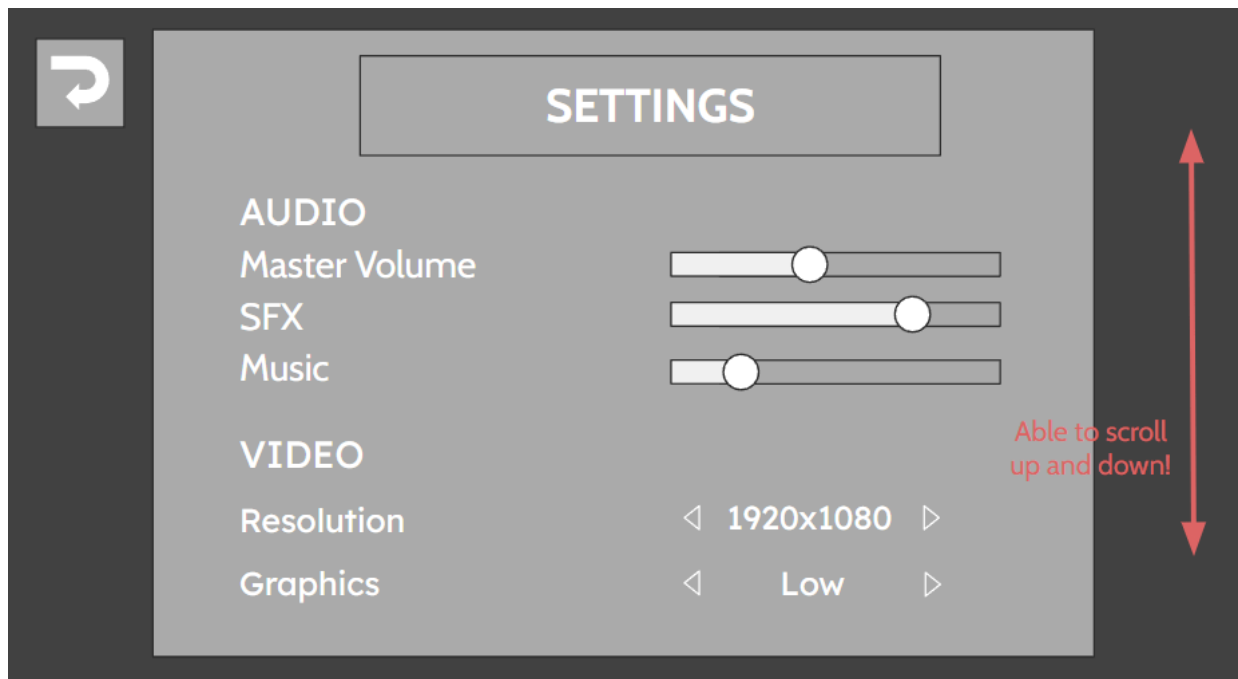

Pause Menu

Tutorial Menu

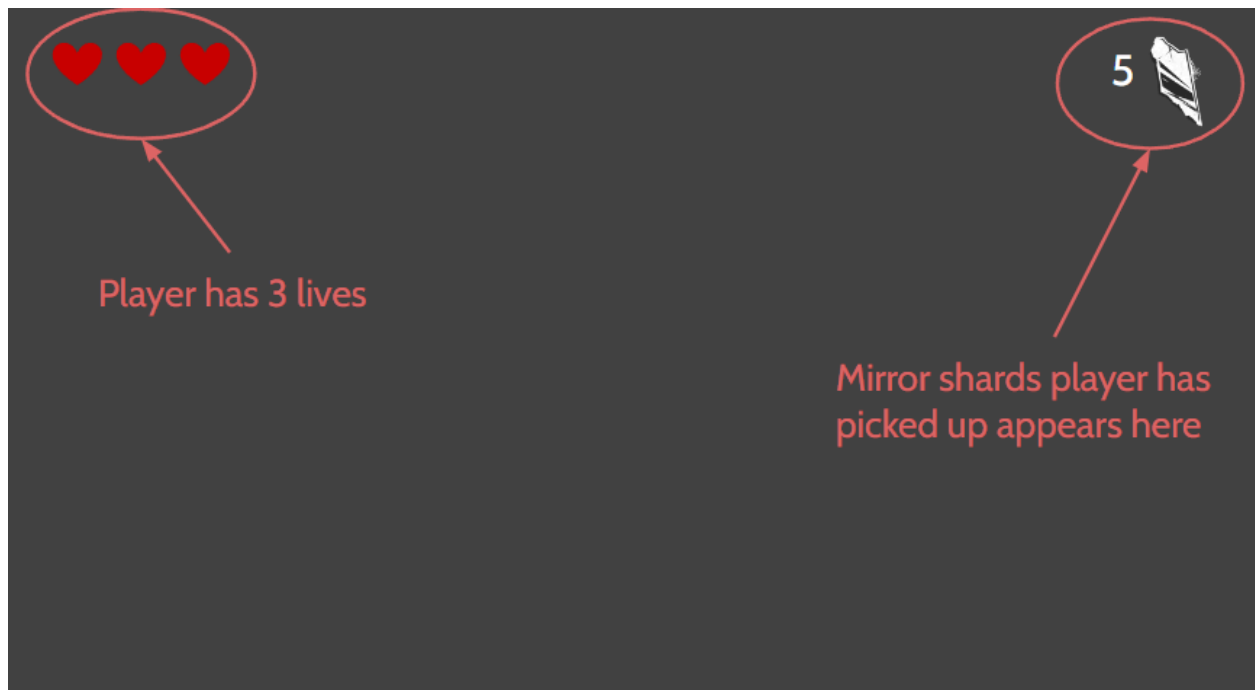

Settings Menu

Credits Menu

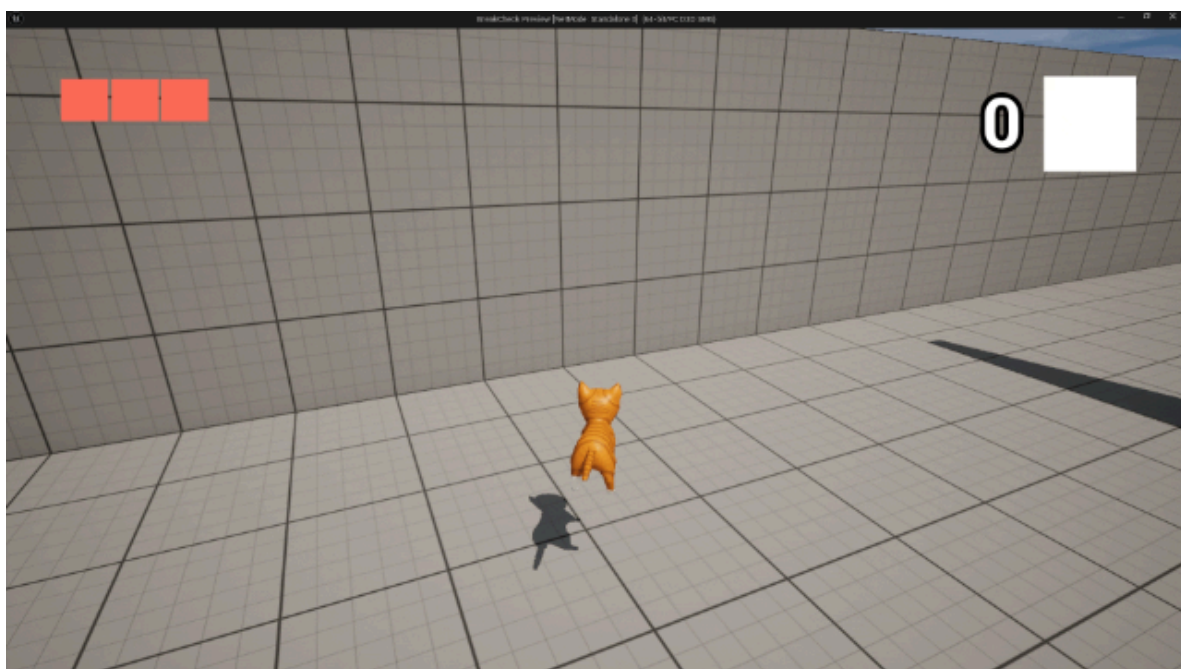

Heads-Up-Display

8.2 Camera

The camera in Ocelot Odyssey will sit behind the playable cat character in a third person view, and will have the ability to be freely moved around by the player by the mouse.

8.3 Controls

Keyboard & Mouse Controls	Function
WASD Keys	Walk (Left, Right, Forward, Backwards)
Mouse Movement	Camera Pan
E Key	Interact
Spacebar	Jump/Double Jump
Shift	Sprint
Esc	Open Pause Menu
Left-Click	Use Tail Whip
T Key	Cat Talk (STRETCH GOAL)

8.4 Audio

Audio in Ocelot Odyssey will be based around the theme of jungle adventure, and consist of striving to maintain a bit of a mysterious undertone that will fit well when our Player is tasked with solving the puzzles within the game.

Background Music

Background music in Ocelot Odyssey will be themed around music you'd typically expect to hear in a jungle adventure. It will consist of natural sounding orchestral instruments, (such as bongo drums, marimbas, maracas, flutes...) and maintain a somewhat mysterious vibe, which will align well with the puzzling nature of our game.

Background Ambience

The background ambience of the game will amplify the jungle theme of the game, with the inclusion of tree rustling sounds and exotic animal sounds that may be heard in the distance of this temple.

Sound Effects (SFX)

Sound effects in Ocelot Odyssey will also be natural sounding, and be heard whenever the Player interacts with something within the environment. With most of the UI being wood panelling, the sound effects will feature wooden-esk type sounds when the Player clicks on these buttons. Except for when the Player clicks on Play, which will feature a jungle themed jingle to welcome the Player into the game.

The Ocelot himself will have movement and vocal sound effects of a real ocelot.

9.0 DEVELOPMENT

9.1 The Team

Here at Break Check Studios, we got the finest of fine wine developers on our team. Our team consists of 3 designers, 6 artists, and 4 programmers (13 developers total) -

Designers

Naomi Kendall (*Lead Designer*)

Ajsan Aje

Craig White

Artists

Ewan Dawson (*Lead Artist*)

Shane Worth

Maya Marando

Mercedes West-Schlick

Millie Alston-Campbell

Jesse Mort

Programmers

Benjamin Strebs-Stelps (*Lead Programmer*)

9.3 Potential Risks

RISK	SEVERITY	LIKELINESS	MITIGATION STRAT
Too Many Art Assets	Medium	Likely	Reduce
Miscommunication Of Game Concept	Medium	Very Likely	Reduce
Losing all our work	High	Probable	Avoid
Overscoping With Ideas	Medium	Very Likely	Avoid
Frustrating Puzzles/Mechanics	Medium	Probable	Reduce

9.4 Delivery Milestones

OCELOT ODYSSEY MILESTONE SCHEDULE

ALPHA		BETA			GOLD
Week 1	Week 2	Week 3	Week 4	Week 5	Week 6
Everything implemented and at bare minimum <i>functional</i> Grey Boxed scenes and levels, greybox assets etc..		Refine and polish our (hopefully) functional game. Polish puzzle levels, mechanics, traps, character movement. Start implementing finalised assets into the scene. TEST TEST TEST Gain feedback and iterate!			Final tweaks and changes are done here, otherwise everything should be final and a huge focus on polish and weeding out most if not ALL detrimental bugs. ALL final assets should be implemented in this stage. Should be about ready to be released as a game people can play.

9.5 Production Software

The team will use the following software for the project -

ART

Maya - *Will be used for poly modelling*

Zbrush - *Will be used for sculpting 3d models*

Substance Painter - *Will be used for texturing*

PROGRAMMING

Unreal Engine 5.4.3 - *Our chosen game engine for our project.*

Perforce - *Our chosen software for source control of our project.*

SOUND

Soundsnap - *Source of free sounds we will use within the project.*

Audacity - *Used to mix and master our sounds to manipulate them how we want them for the project.*

Pixabay - *Another source of free sounds we will use within the project.*

COMMUNICATION

Discord - *Place of communication where we are all the most comfortable using.*

Teams - *Professional line of communication, and file sharing.*

Zoom - *Voice chat, communication to teachers and other classmates.*

ORGANISATION

Trello - *Kanban board, place where everything about the project can be found, task delegating and bug issues/fixes found here.*

Google Docs - *Main program we use to organise our documents like the technical document and game design document.*

Google Sheets - *Used for our asset lists and our morning scrum meetings.*

Google Slides - *Used for creating the Art Bible, concept mockups with shapes, and our presentations to stakeholders.*

Screen-To-Gif - *Used to capture our progress for the weekly standup presentations*

Snipping Tool - *Used for screenshotting our progress for weekly standup presentations and useful for sharing progress and potential issues with each other*
