1.0 VERSION HISTORY

Version	Date	Description
0	11/04/2024	Initial Document & Concept Created
1	12/04/2024	Died & Got Sick :')
2	14/05/2024	EPIC RETURN (Unsick), GDD formatting, All sections implemented, concept overview done
3	16/05/2024	Created logo, added USPs, mechanics added
4	22/05/2024	Added demographic section, art style, gameplay section, more credits added, gameplay loops added.
5	26/05/2024	Added narrative and story, and basics of the narrative progression
6	28/05/2024	Received feedback that I was over scoping the project and to scale it back in order to create the game in a reasonable time, and catch up.
7	30/05/2024	Added Heads Up Display and its features. Added prototype plan. Cut some sections to downscale project. Added required

		assets.

2.0 OVERVIEW

2.1 At-A-Glance Overview

Official Name	Wrong/Right Answers Only
Genre	Interactive Fiction, Horror, Puzzle, Mystery
Theme	Doors, Psychological Torment, Horror, Comedic
Camera Perspective	First-Person Perspective, Free Camera
Game Engine	Unreal 5.3.1
Type	3D
Age Rating	16+
Target Audience	Older Teens/Young Adults
Platforms	PC
Players	Single-Player

2.2 Elevator Pitch

“The rules are simple, choose the right answer, and you live, choose the wrong answer, and you die. Easy, Right!? What could possibly go wrong? 😊”

2.3 Game Concept

Wrong/Right Answers Only is an immersive single-player 3D puzzle horror game with a strong focus on an unfolding narrative that taps into the fourth wall. Your job as the player is to try to

solve all the puzzles in each of the levels to survive, and put an end to this disturbing little game, once and for all.

2.4 Unique Selling Points

The unique selling points of the game are:

- ❖ **The Unique Combination Of Genres**
- ❖ **Fourth Wall Breaking Narrative**
- ❖ **Immersive World That Keeps You Nervously Sweating**
- ❖ **Dialogue With An NPC But Its A Trivia Game**

2.5 Look & Feel

Art Style

Artistically, Right Answers ONLY will err on the spookier, creepier side aesthetically, and adapt traditionally spookier traits such as limited vision, film grain and distortion, dimly lit and dark room light, spooky vfx etc.. to make the player feel uneasy and moderately uncomfortable. The game will make use of 3D modern and realistic assets and flat textures, including the template assets outside of the main building, without any modifications made to it.

Visually, the majority of the rooms will be coated in desaturated and cooler dull colours, to make the saturated colours stand out in the environments (particularly bloodstains with saturated red colour, to emphasise creepiness and make key things such as player health stand out).

3.0 GAMEPLAY

3.1 Objectives

Main Player Objectives

- ❖ Try to stay alive

- ❖ Correctly answer the questions and go through the right door
- ❖ Solve the overarching mystery

Win/Lose Condition

- ✅ You can WIN the level by walking through the door with the correct answer.
- ❌ You can LOSE the level by losing all 3 of your lives.

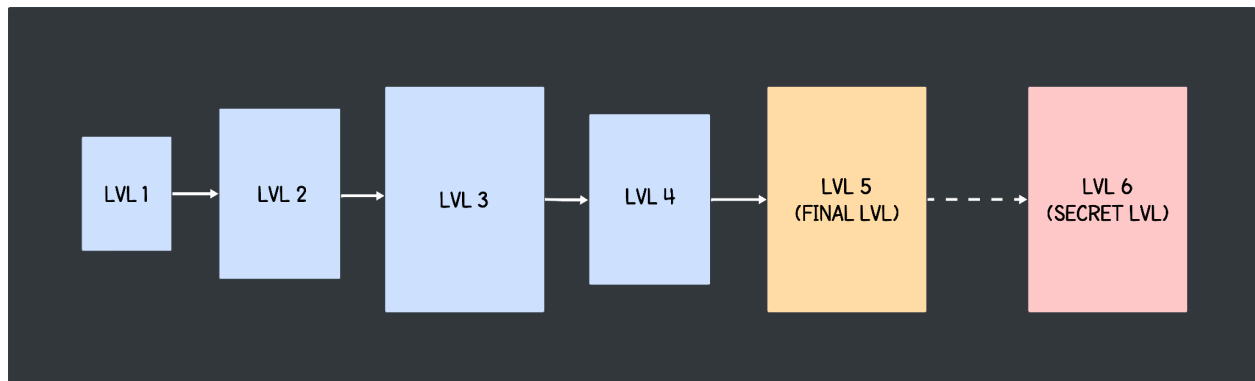

Once the player has completed all the levels successfully, the game is finished, and the player receives the ending titled “*Unsatisfying Ending*”.

The player can unlock another ending (the TRUE ending) called the “*Satisfying Ending*” by using all their collected “keys” to unlock a locked door at the final level.

3.2 Gameplay Progression

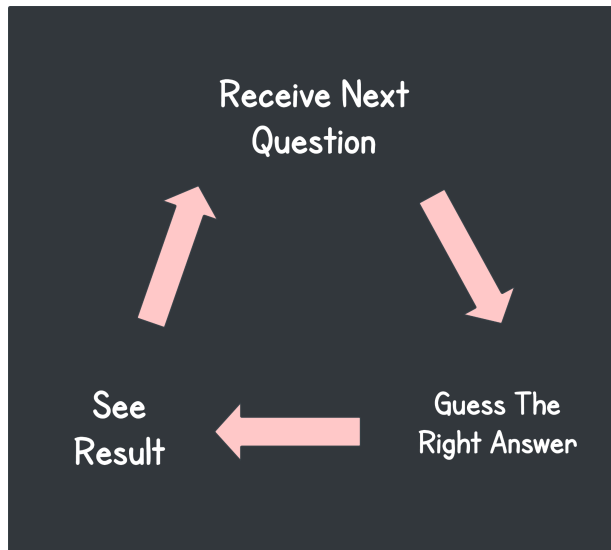

The player progresses the game through successful completion of each of the rooms. Each room is a different level in the game. There are 6 levels in total, including a secret level which the player can access and complete by collecting all 5 objects in each of the levels.

The player progresses through the levels linearly as shown below:

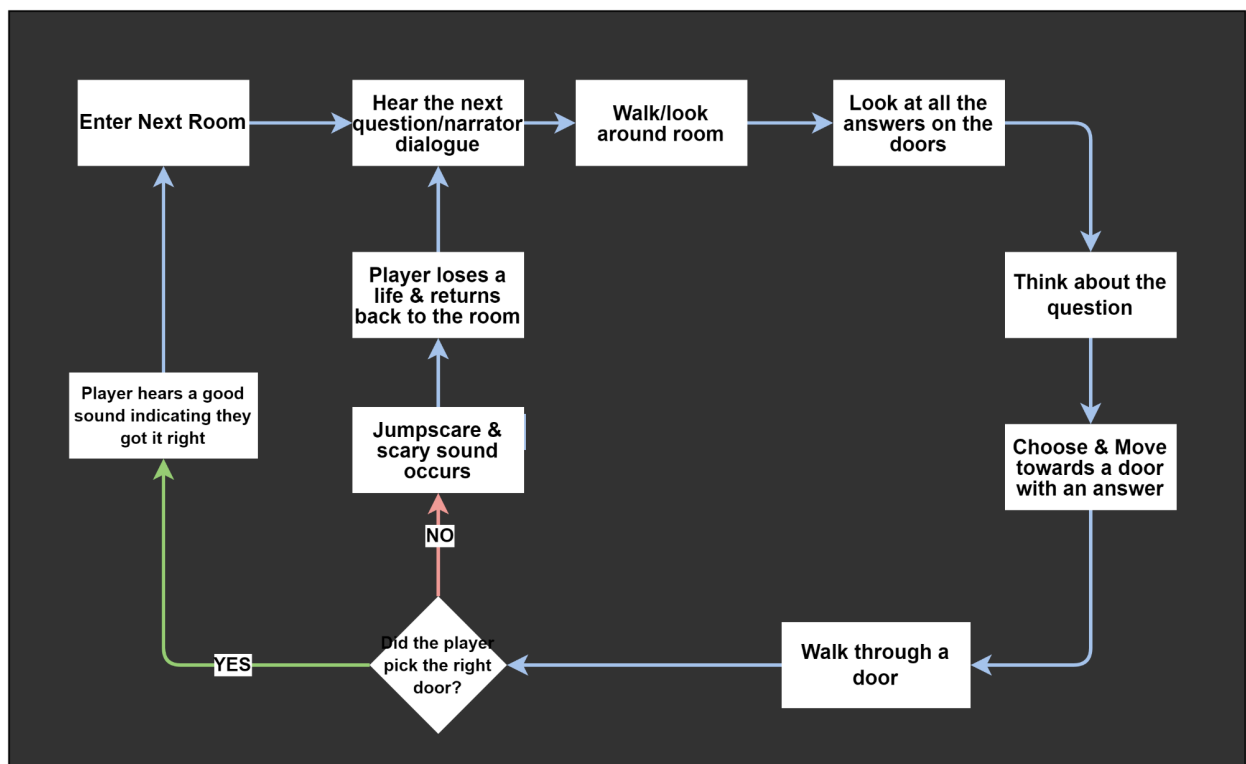

3.3 Gameplay Loops

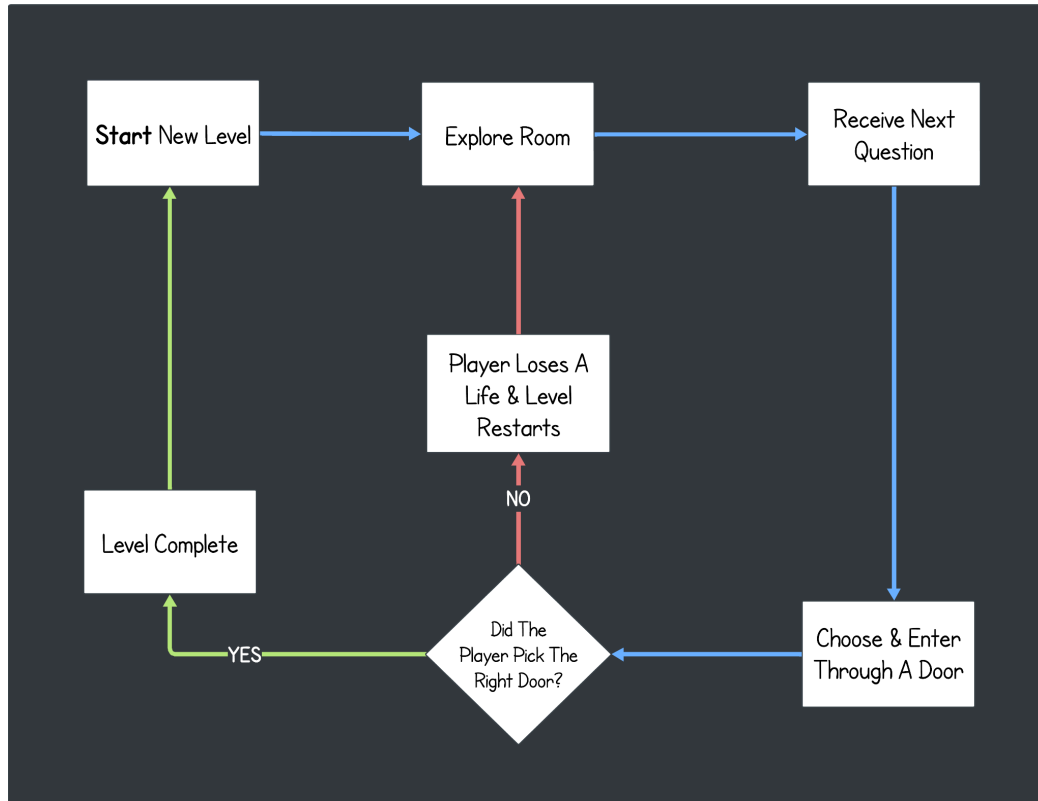

Core Gameplay Loop

Moment-to-Moment Gameplay Loop

Core Level Loop

4.0 MECHANICS

4.1 Movement

The player is able to move freely in various different directions, and can move both horizontally/vertically and diagonally in each direction.

Types of Movement the player can do are:

Walk

Default Movement. Move in any direction (forward, backwards, left and right) horizontally, vertically, and diagonally at a walking speed.

Jump

The character the player controls jumps up, and is then pulled down by gravity.

4.2 Player Health

Player begins the game with 3 Lives.

Each time a player loses a life, one of their health “flames” burn out, and they are teleported back to the room with the question they lost a life to. If all 3 lives are burnt out, they are teleported back to the start, and have to answer the questions again.

4.3 Doors

These doors open automatically on approach and look menacing like they want to tempt the player to go in.

Doors act as the answers to the question. The doors are presented side by side in a row to the player. Number of doors is based on the questions present, however no less than 2 at any given time. Players must choose a door with an answer written on it they think is correct. They then must walk through the doorway. If they chose wrongly, they “die” and get the jumpscare, lose a life, and restart back at the question they were trying to answer.

4.4 Keys

Within each level, there is a hidden key fragment the player can pick up and collect. There are a total of 5 key fragments the player can find, and if able to collect all 5 by the 5th level, are then able to unlock the 6th level and the good ending (Satisfying Ending).

5.0 NARRATIVE & STORY

5.1 Synopsis

You wake up in this room, head spinning, eyes strained, you are unsure of where you are or how you got there, all you know is whoever is in charge of this thing, is out to get you..unless you play his twisted game. You're a smart fella, you got this, right?

5.2 Main Plot

In this game you (the Player) wake up with amnesia into a room. You don't know where you are, or what you're doing here, but it seems your only chance at survival is to follow what the Narrator tells you to do, and answer the trivia questions.. whilst keeping your own investigations throughout each room, on the down low. The Narrator is an alien being who is

experimenting and “playing” with humans in this game, and asking them questions and talking with them through doors.

5.3 Narrative Progression

❖ LEVEL 1

Collectable Object: Key Fragment #1 found here.

Lore Reveal: Level 1 will introduce the game rules and act as a bit of a startup tutorial for how to play the game.

Dialogue: *“Hello! Welcome to Right Answers Only, you may not know who I am, or how you got here, but something drew you to this place, and whether you remember those reasons or not. Clock’s ticking.. It’s time for us to play a little game.*

The rules are simple- answer the questions, by walking through the door with the right answer, and you live! However, walk through the wrong door, and you die.

So, who’s ready to play with me?”

Correct Answer: Yes

❖ LEVEL 2

Collectable Object: Key Fragment #2 found here.

Lore Reveal: Level 2 will try to add suspicion on the game, and that the questions are potentially not factual but opinionated and biased by the Narrator.

Dialogue: *“Good, now that you understand how to play, welcome to level 2. Let’s start off easy shall we? Which is the morally correct way to spell Isaac? Isaac or Issac?”*

Correct Answer: Isaac

❖ LEVEL 3

Collectable Object: Key Fragment #3 found here

Lore Reveal: Level 3 will continue on the disguise that this game is your typical trivia game, but giving the player a question that relates a little bit too close to home. Why is AIE, the school we go to, mentioned in a video game?

Dialogue: *“You’re a clever one aren’t you? Let’s make things a little more difficult... An AIE manager has \$13,387 to spend on PCs. Each PC costs \$546. There are 24 students in class. Is the budget sufficient for the 24 PCs?”*

Correct Answer: Yes

❖ LEVEL 4

Collectable Object: Key Fragment #4 found here

Lore Reveal: Level 4 will continue on the theme of Level 3, with the disguise of a typical trivia game.

Dialogue: *"First year Diploma students are put into 8 groups. 5 groups each have 18 students. The other group each has an equal number of students. Altogether there are 132 students. How many students are in each of the other 3 groups?"*

Correct Answer: 14

❖ LEVEL 5

Collectable Object: Key Fragment #5 found here, last fragment, and the player can now go through the secret door for the good ending.

Lore Reveal: Level 5 will add emotions, feelings and thoughts to the Narrator and try to bring the Player on the ride as well.

Dialogue: *"Congrats!! You made it to the end! Now why don't you just go on through that winner's door sweetheart.." "Haha..oh you thought it would end? Didn't you? Just like that huh? You show off a little, with your maths knowledge and you go along your merry way... Not how life works. There are no winners. Welcome to eternal hell. You did this to yourself, to me, to us, for eternity. You did this. So you have no one to blame but yourself. See you on the flip-side buddy"* (Game Restarts to Level 1)

Correct Answer: Go through the secret door

❖ LEVEL 6

Lore Reveal: This game was made inside an unreal template project, and none of this was real, you are presented with a mirror that reflects back on yourself, and you realise the narrator was you, and you were doing this to yourself, and now, it is time to go home, back to reality.

Dialogue: *".....What.. how are you... you broke my game. You broke OUR game. Why? I thought this meant something to you, to us. But now it is broken, just like in real life... Why did you come here? If you didn't want to play?I suppose, it is getting the same old same old... I guess.. Things in life can't always stay the same.. No matter how much you want it to, and no matter how much you try to cling on to it...but I want to..it was happy...and peaceful... tell me.. If we turned off this game right now and turned around... what would we have to look forward to?" "It feels nice to stay here too my friend, but there are so many things I want to see, to do, to experience, things you want to experience. Don't stomp yourself from living in the present because you're too caught up in the past to live in it. Turn off the game, turn around, and go live your life."*

Correct Answer: Life (Forcibly Ends Game)

5.4 Characters

THE PLAYER

Name: The Player

Age: Player's Age

Species: Human

Description: Is a human like creature who the player plays as, and supposedly represents the person playing the game behind the screen.

Role In-Game: Is the character the player can control and see through a first person perspective, to try and create the illusion that this character they are controlling is themselves. They are the main character of this game.

THE NARRATOR

Name: The Narrator

Age: 203,860

Species: Alien Entity

Description: Spooky, eerie and unearthly voice that is heard by the player in-game, though you never see who is talking, almost like it's being played on loudspeaker, or broadcasted.

Role In-Game: Is the grand mastermind and narrator behind the game, and gives the player the questions. He is the guide for the player, and gives the basics of the rules for the game they will play.

6.0 DEMOGRAPHIC

6.1 Overview

Wrong/Right Answers Only aims to attract:

- ❖ 16 to 25 Year Olds
- ❖ Primarily Males
- ❖ Horror Puzzle Fans
- ❖ Psychological Horror Narrative Fans
- ❖ Problem Solvers/Trivia Fans

- ❖ People Who Raised Their Hand in Class in High School
- ❖ Those Who Like A Good Mystery
- ❖ Fans Of Narrative-Driven Games

6.2 Persona Profiles

Example 1 - *The Problem Solver*

Name: Tommy Thomas

Age: 24

Gender: Male

Location: Brisbane, Australia

Occupation: Psychology Student, Casual Employee at Kingsleys

Previously Liked Games: Lethal Company, The Stanley Parable, The Witness, Portal 2, Guitar Hero

Summary: Tommy Thomas is a university student, currently studying Psychology, and working casually at Kingsleys. In his spare time he likes to swim, play guitar hero at his campus, and browse the steam page for interesting games to play. He is interested in games that make him think deeper in order to solve a problem, and games with clever plots and stories to discover.

Example 2 - *The Avid Horror Fan*

Name: Caleb Kaleb

Age: 20

Gender: Male

Location: Michigan, USA

Occupation: Freelance Graphic Designer, Part-Time Manager at Coles

Previously Liked Games: Five Nights at Freddy's, Phasmophobia, Dark Souls 1,2 & 3

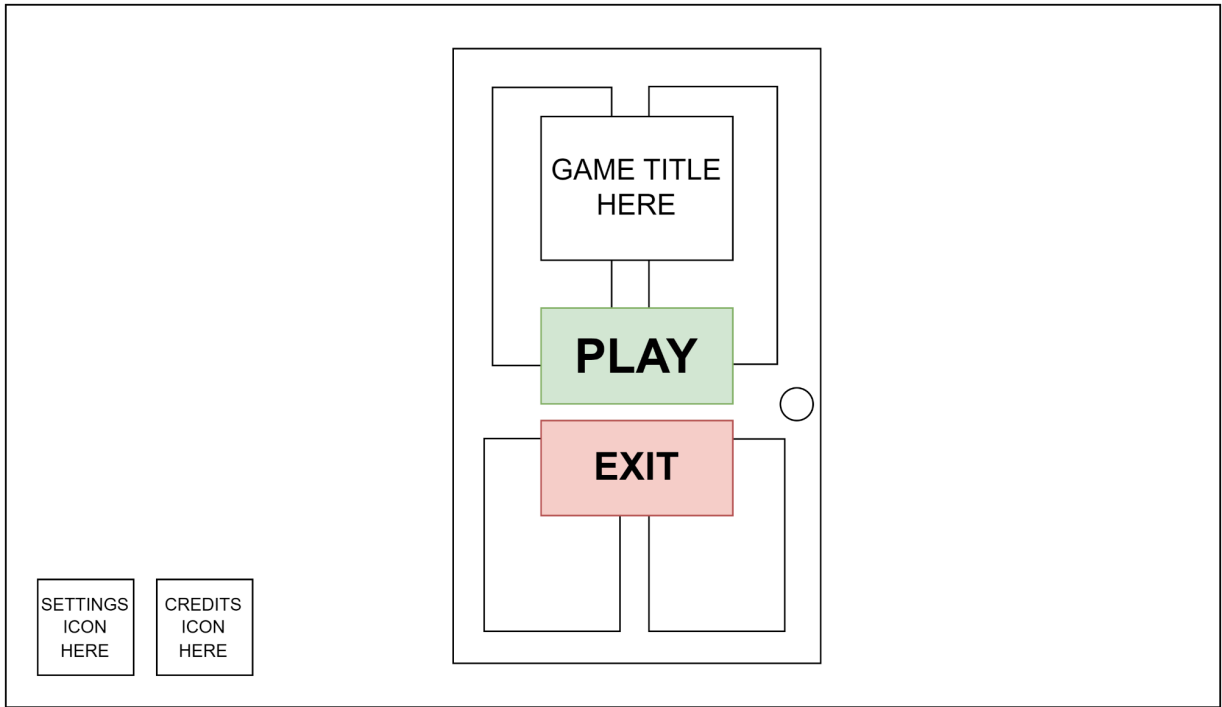

Summary: Caleb Kaleb is an aspiring graphic designer, honing their craft online through some freelancing work, and they also work part-time as a manager at Coles. In his spare time, they like to hang out and play games with his friends, or rage on X (formally known as twitter) about the latest political discussion or beating up kids on overwatch 2. They are interested in games that are on the scarier side, and keeps him on the edge of his seat, and gives him that dopamine rush.

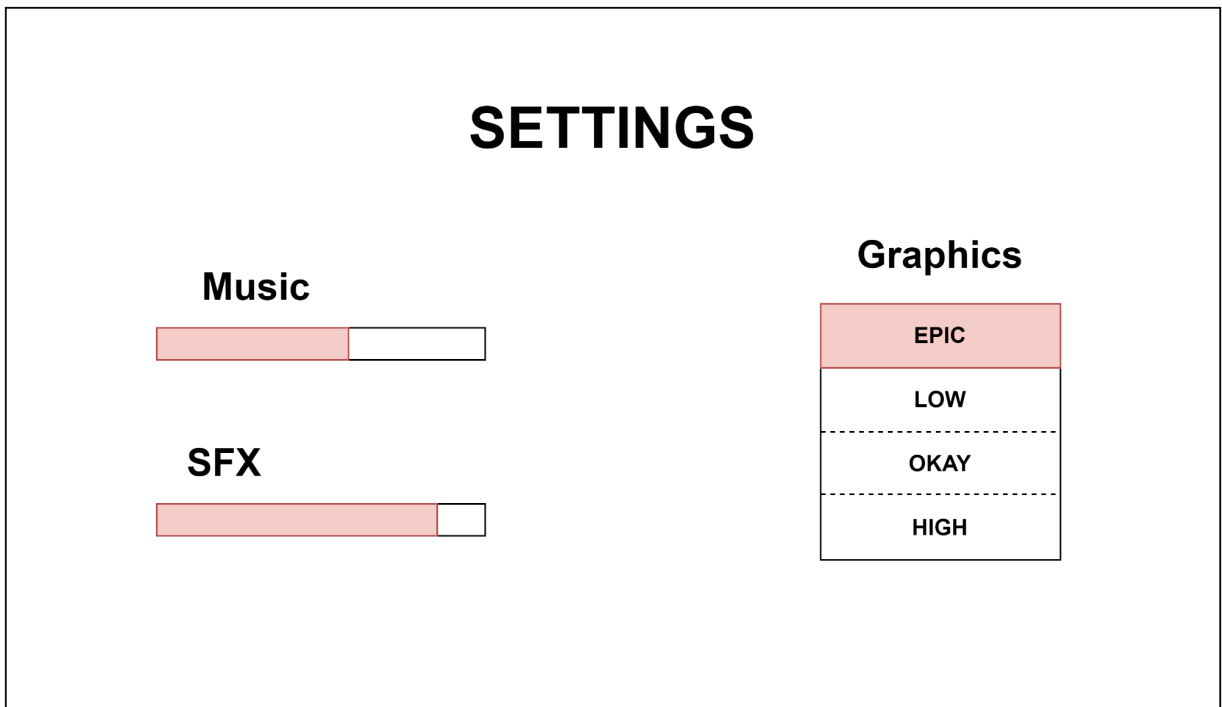

7.0 INTERFACE

7.1 A Visual Representation

Title Screen

Settings Menu (Stretch Goal)

Pause Menu

GAME PAUSED

CONTINUE

SETTINGS

MAIN MENU

Heads Up Display

7.2 Features

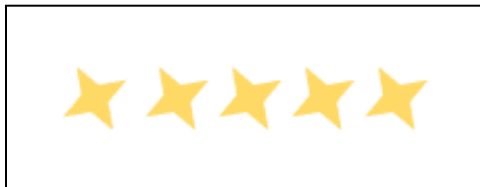

The information displayed on the Heads Up Display will be Player Health and Key Collected.

Player Health

Each time the player chooses a wrong door, they “die”, and lose a life. Each time this happens, a heart will disappear here.

Keys Collected

Each time a player has picked up a key fragment found in each room, a star will appear here. It will initially not appear on screen to further keep this mechanic a bit more hidden, until it needs to be revealed.

7.3 Control Scheme

Controls (Keyboard)	Function
WASD Keys	Walk (Left, Right, Forward, Backwards)
Mouse Movement	Camera Pan Around
Spacebar	Jump
E	Pick Up
Esc	Open Pause Menu

7.4 Audio

Background music for *Wrong/Right Answers Only* will be ambient creepy noises and sounds.

SFX (or sound effects) for the game will make use of real human sounds and noises, made from the developer and her classmates.

8.0 DEVELOPMENT

8.1 Scope

1. Initial Project Setup

Create new project with blueprints and title it WRAO Prototype (*WRAO acronym for Wrong/Right Answers Only*)

Set up the project with first-person perspective, with the default movement settings (walk, jump, free camera movement)

2. Basic Scene Setup

Build up the first level and room with two doors. Create a small-ish room with a ceiling, floor and walls, and leave two gaps in the wall for the doors to go, and create a long hallway for the player to walk down for each door.

3. Basic Door Mechanic Functionality

Set up trigger boxes at the end of each door's hallways.

Put a death trigger box at the end of one hallway, which respawns you back into the room.

Put a win trigger box at the end of the other hallway, which displays a "Correct!" UI popup and loads the player into the next level.

4. Implement Player Health

Set up a UI which displays 3 lives. Each time the player "dies" they should lose a life. If they've lost all 3 lives, display Game Over UI, and restart the game back to beginning.

5. Implement Questions & Answers UI

Have all the doors in each level display the possible answers via UI placed onto the door assets. One will be the correct answer. the other will not be.
When the player enters the level, have the question the player must answer, displayed above the doors with the answers.

6. Implement Title Screen UI

Add a title screen which the player is presented with each time they boot up the game. This title screen at bare minimum will have a play button and exit button, and display the game's logo.

7. Implement Pause Menu UI

Add a pause menu which allows the player to pause the gamestate by pressing Esc.
Add a button which allows the player to return back to the main menu.

8. Implement Audio & Dialogue

Add level dialogue to start as soon as the player enters the level.
Add jumpscare audio to the death trigger box, so it plays as soon as they enter the wrong door and die.
Add the correct answer jingle audio to the win trigger box, so it plays as soon as they enter the right door.

9. Playtesting, Feedback & Iteration

Conduct playtesting with teachers, peers & myself, to weed out any bugs and glitches that may be present.
Set up a google forms feedback form, to start receiving feedback from people. Make sure to ask questions that will help gain constructive criticism that will help the overall development of the prototype.
Make iterative changes and development decisions based on the feedback given.

8.2 Required Assets

No assets are necessarily required for this, as for prototyping, cube objects and default unreal UI can suffice.

However, *wanted* assets to spruce up the prototype would include:

3D Objects

- ❖ Door Asset & Door Opening/Closing Animation
- ❖ Room Wallpaper & Flooring Assets
- ❖ Room Decor Assets (to fill the room with interesting decoration and hide the key fragments)
- ❖ Key Fragment Sparkle Asset

Visual Effects

- ❖ Spooky Film Grain & Distortion VFX
- ❖ Vignette VFX
- ❖ End of Door Fog VFX
- ❖ Key Fragment Sparkle VFX
- ❖ Dimly Lit Spooky Lighting VFX (Good lighting only on the doors and question presented)

Audio

- ❖ Player Movement SFX
- ❖ Spooky Background Ambience SFX
- ❖ Spooky Background Music
- ❖ Jumpscare SFX
- ❖ Correct Door Jingle SFX
- ❖ Narrator Voice Recorded Audio
- ❖ UI Menu SFX
