Feedback Log

Version	Feedback	Date
GDD v0.1	Presented game pitch to clients Jin Chan Yum Wai and Cliff Shariff. Feedback from Jin: Referred to Cluedo as a game reference point to handle the game's	11/06/2025

	scope. Suggestion to come up with several characters who are potential suspects of the crime • All of the clues and information gathered within the crime scene can be identified as evidence to deduce who out of the list of suspects committed the crime	
GDD v0.2	First update meeting held with client Jin Chan Yum Wai. Discussion points: • Concerns raised on the current game direction and lack of defined scope. • Discussions made between designers and client on the game's narrative and gameplay structure unable to come together cohesively • Recommendation from client to simplify narrative and determine a clear outcome of the story i.e. the murder case investigation reveals that a murder did not take place and was staged, allowing the victim/culprit to escape and get away with a different crime Decisions made: • Confirmed to simplify narrative and reduce scope to align with remaining time left of project	17/06/2025
GDD v0.3	Second update meeting held with client Jin Chan Yum Wai. Feedback from Jin: • Recommendation to prioritise the game win conditions to complete the game and determine the game's ending	24/06/2025

1.0 Elevator Pitch

A Detective is sent to investigate the mysterious disappearance of an old man named Isaac Chuck after a noise complaint was reported by his neighbour Jin. The detective explores the house of the victim to uncover a plot of murder, betrayal and extortion, all with a single camera.

T

2.0 Overview

Genre	Mystery, Puzzle, Escape Room
Engine	Unreal Engine 5
Platforms	PC
Point Of View	First-person VR
Target Audience	Teens to Young Adults (13-25)
Target Age Rating	13+

3.0 Target Audience

3.1 Overview

Framed's main target demographic is primarily 13+ teens to young adults with a casual to mid-range skill level, something that most can pick up easily and play. The game will appeal and market to a younger audience who are

3.2 Virtual Reality Enthusiasts

Virtual reality enthusiasts love the immersion and intractability of virtual reality projects, being able to directly interact with the environment and the ability to manipulate environments that are limited when on a keyboard and mouse. the game caters to this audience by making intractability and immersion a core part of the gameplay, needing the player to interact with objects, manipulate them for various puzzles or look around them for clues to progress the level.

3.3 Murder Mystery Enthusiasts

Murder mystery enthusiasts love a good narrative with a core mystery. They also love to theory craft and solve the mysteries that the media offers. The game caters to this audience through the core gameplay, being to collect clues through photography, placing clues on a corkboard, and solving puzzles to progress the narrative, ending the game once the player has all the clues placed.

3.4 Puzzle Enthusiasts

Puzzle enthusiasts love tackling and solving problems, especially ones that make them think outside the box or that need a creative solution for. They crave the AHA moments of piecing together the dots of a challenge and which makes them feel clever. The game will include various puzzles the player has to solve and errs on the escape room side of things.

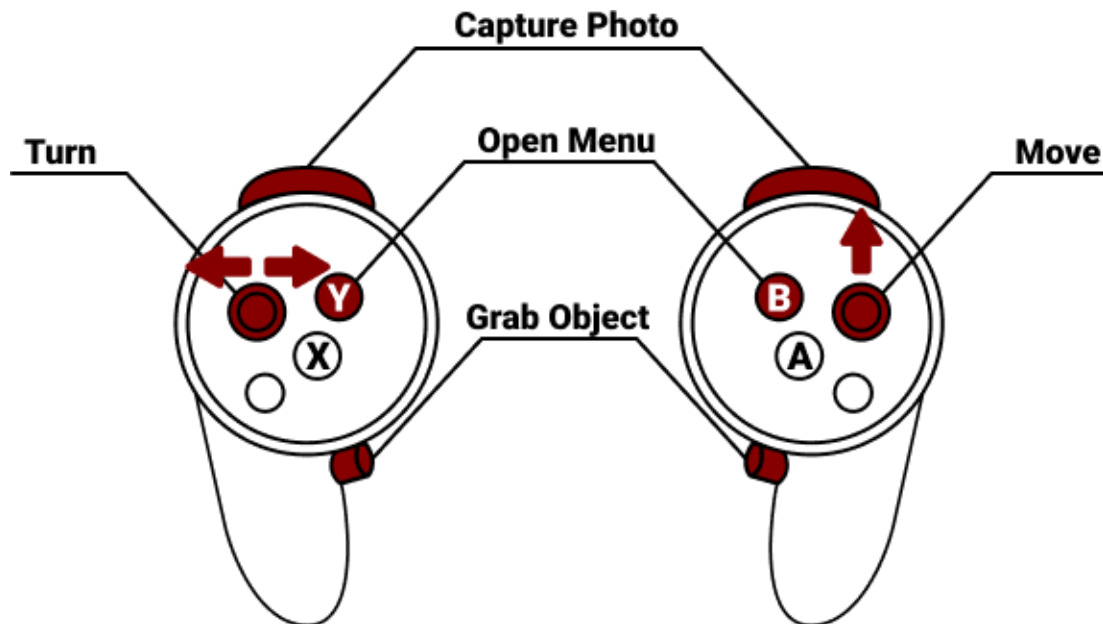

4.0 Story

Premise

A private detective named Detective Daniels is called in to investigate the mysterious murder of a well-known underground crime boss named Issac Chuck. He is tasked with observing objects around Issac Chuck's office until he learns the deeper, darker truth - the murder wasn't real, it was framed.

5.0 Gameplay

5.1 Controls (Layout)

Action	Button	Details
Select Position To Move (Blink Movement)	Push and Hold Up on Right Control Stick	While the input is held, a vector and circle will appear to indicate the move position. The controller can then point at the ground to select the desired location. Releasing the control stick input will move the player to that position.
Turn	Push Left on Left Control Stick Push Right on Right Control Stick	Turn - changes forward facing direction. Pushing left turns the direction left Pushing right turns the direction right
Game Menu	Press Y Button Press B Button	Y button opens menu on left hand B button opens menu on right hand

		Press the button again to close menu
Grab Object	Press & Hold Left Grip Button Press & Hold Right Grip Button	Grip Hand Grab Object (if VR hand is in collision with object)
Capture Photo	(While camera is Held) Left Trigger	With the camera in the same hand, pressing the trigger button will take a photo

5.2 Movement Mechanics

5.2.1 Look

The game will use a common VR look feature - moving the camera in a 3D space by tracking players head movements. This will not have any limitations, the player may be able to angle their head as they wish and can use this feature freely.

5.2.2 Blink Movement

The secondary movement mechanic is Blink Movement, a feature involving pointing the right VR remote towards a position on the floor within a reachable radius, and pressing a button to teleport the character to that designated position. To handle the movement transition in a way that prevents nausea and motion discomfort, a blink transition is used in between the teleport states. The blink is short (about a second) and allows the player to readjust to their surroundings quickly and feel grounded.

For example, the 'Blink' transition would work in the following numbered states:

1. Target location set, move input triggered
2. Screen fade in (black)
3. Play walking sound
4. Wait a second
5. Teleport to target location
6. Screen fade out

5.3 Interaction Mechanics

5.3.1 Grabbing Objects

From the player's perspective, there are VR hands visible within the game that are each tied to the respective VR controllers - the left controller controlling the left hand, and the right controller controlling the right hand.

With the desired hand, the player can pick up objects in the environment by reaching out with the hand, making contact with the object then holding down the trigger button of the respective controller. While the trigger button is held, the hand will grip the object, allowing the player to use their controller to move and manipulate the object in the environment. When the trigger button is released, the VR hand will no longer grip the object.

Grabbing and interacting with objects throughout the room is necessary as the player may need a closer view of the object to identify tiny or hidden details that may serve as clues for the investigation.

5.3.2 Camera

The player can use a camera to take photos of evidence discovered at the crime scene. Due to the time period, the camera has some archaic visual features to closely align to the time period, but for gameplay purposes operates similarly to a traditional camera.

There is a viewfinder on the top of the body, and a capture button beside the viewfinder. By grabbing the left side of the camera body with the left hand, the player can then carry the camera and take photos with one hand. For as long as the camera is held, the player can then squeeze the trigger button to capture a photo (see image).

When the capture button is pressed, the film is ejected from the side of the camera. There is a film development wait time until the details of the photo are fully visible.

The film development process works in the following steps:

- The Capture button is pressed
- A film begins to print out on the side of the body

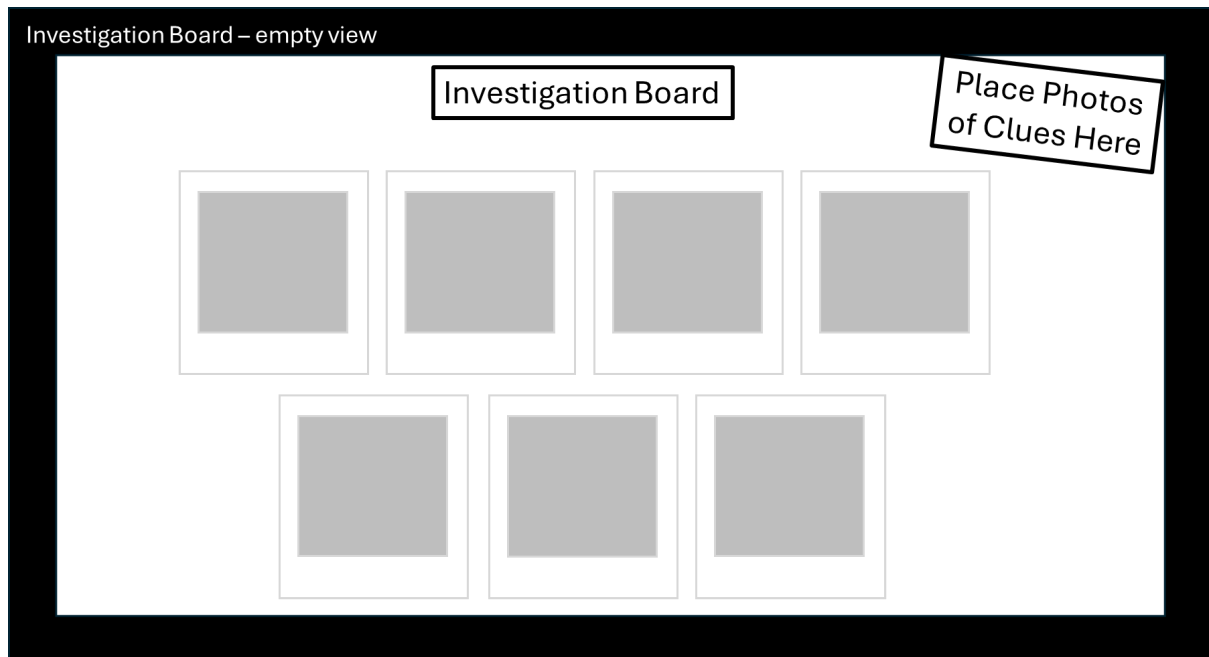

5.4 Other Mechanics

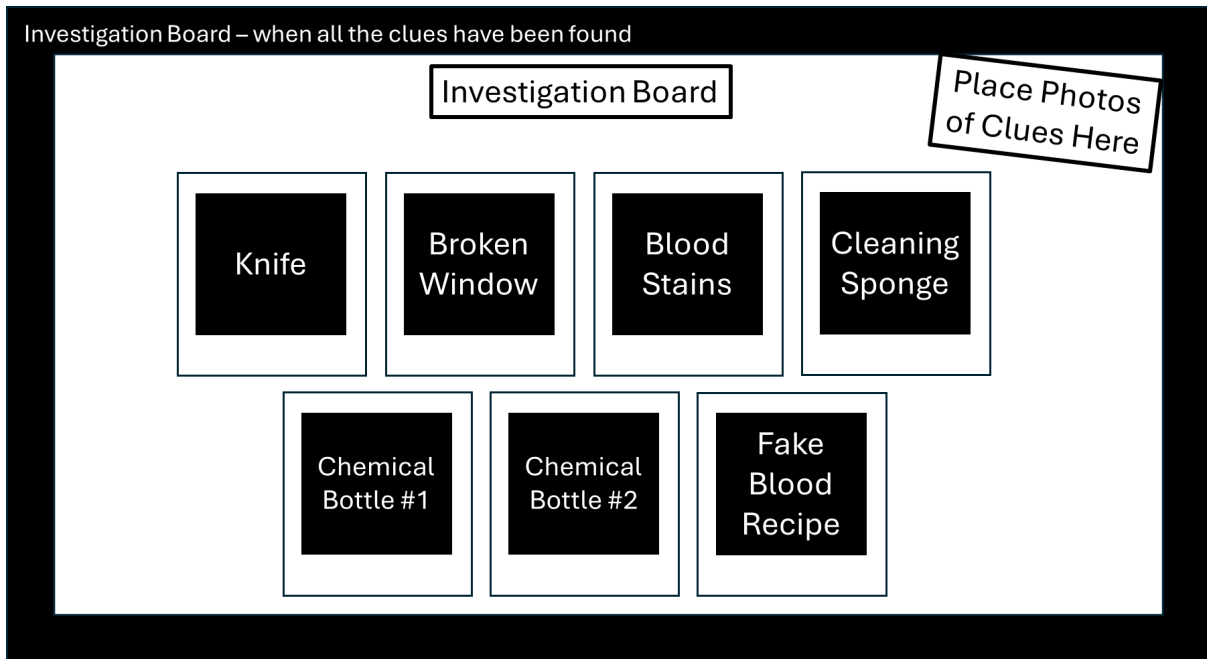

5.4.1 Briefcase

The briefcase is located in the crime scene that contains the Case File, a Camera and tutorial sheets with game instructions. The briefcase is also used as a transition when the player both starts and finishes the investigation.

5.4.2 Investigation Board

The investigation board is a large board located at the crime scene where the player can place photos of key evidence related to solving the crime. At the beginning of the game when no photos have been taken yet, the board will have opaque 'slots' where photos can be attached to. These slots are assigned to specific clues, eventually carving out the verdict of the investigation.

Win Condition: Once all of the appropriate evidence is placed in their predetermined slots, player movement is disabled and is moved towards the briefcase, which then shuts - symbolising the closing of the case. They are brought back to the main menu with the case verdict

5.4.3 Locked Safe

The safe is one of the victim's possessions that when opened, contains evidence to solve the investigation.

The safe is cube-shaped and has a door that can be opened after opening the lock mechanism. On the door is a display to view the code input and a numeric keypad to input the 4-digit code.

The player can use the controller on either hand to point and select the key to input (using the trigger button). When 4 incorrect digits are entered, the display will reset and cycle to another set of 4 digits to input until the correct one is typed.

With the correct 4 digit combination entered, the door will automatically open, revealing the contents inside.

5.5 Level Mechanics

5.5.1 Puzzles

The investigation process will require the player to solve a series of puzzles located throughout the crime scene. Solving a puzzle rewards the player with a key piece of evidence that will help solve the crime.

Starting Clues:

- **Clue 1:** Knife covered in blood, supposed murder weapon
- **Clue 2:** A cloth rag stained with blood, suggesting the victim attempted to stop themselves from bleeding
- **Clue 3:** Broken window, suggesting a break-in occurred prior to the murder

There are other objects in the study known as 'Hints' that the player is likely to spot that may direct the player to solve a particular mystery.

Hints:

- **Hint 1:** An empty beaker on the desk
- **Hint 2:** A locked safe in the corner of the study
- **Hint 3:** A drawer knob on a bookshelf (found after exploring the room), this is the one key item to progress forward into the game's first puzzle.
- **Hint 4:** Books on a bookshelf with specific titles
- **Hint 5:** A read list document found in a cabinet which outlines a list of books to be read in a specific order
- **Hint 6:** Torn pieces of paper with a single number written on them. There are four pieces throughout the level.

5.5.2 Puzzle #1 – The Mystery of the Knob

Goal: Once the player finds a detached knob (Hint 3), they must locate where it could belong to.

Steps:

1. The player will have to search the study for a drawer or cabinet that has a missing knob.
2. The knob will successfully attach to a locked drawer. With it now attached, the player can open the drawer and access its contents.

Outcome: The player has successfully opened a locked drawer and found contributing evidence that someone might have attempted to clean the blood stains.

Reward: **Clue 4 - A cleaning sponge**, this is key evidence that can be photographed with the camera.

5.5.3 Puzzle #2 – The Mystery of the Bookshelf

Goal: Looking at the unorganised books on the shelf, and realising suspicious looking book titles on the spines of the books, the player must rearrange the books in the right order.

Steps:

1. With some exploring, the player will find a document inside a cabinet. The document is a read list (see Titles section), which lists a number of book titles in a particular order. The first three books appear to be crossed out, with the other 6 left uncrossed.
2. With a bit of observation, the player will find books with the exact titles from the read list on the bookshelf beside it.
3. By carefully analysing the read list, the player will notice that the books crossed out on the list are arranged from left to right on the bookshelf. This would be a puzzle hint to indicate that the remaining six books will need to be arranged in order as it is written on the read list.
4. There are snap points for each of the six slots that the books can be arranged in. While a book is grabbed they can move it over to an empty snap point where a visual indicator will appear if a book that is grabbed is nearby.

Titles:

Other books:

1. Red Herring
2. Crime and Murder
3. Deceiving a Detective

'DECEIT':

4. Direction of Lies
5. Exterior Manipulation
6. Chemistry Vol 22
7. Entering the Depths of Hell
8. Importance in Intelligence
9. Truth and Conceal

Outcome: The books are successfully rearranged, revealing critical evidence of a document that describes a method of producing a fake

blood substance, suggesting that there might be more to this murder case than initially thought.

Reward: Clue 5 - Fake Blood Recipe, this is key evidence that can be photographed with the camera.

5.5.4 Puzzle #3 - The Mystery of the Safe

Goal: The player must find the 4-digit combination code to unlock the safe.

Steps:

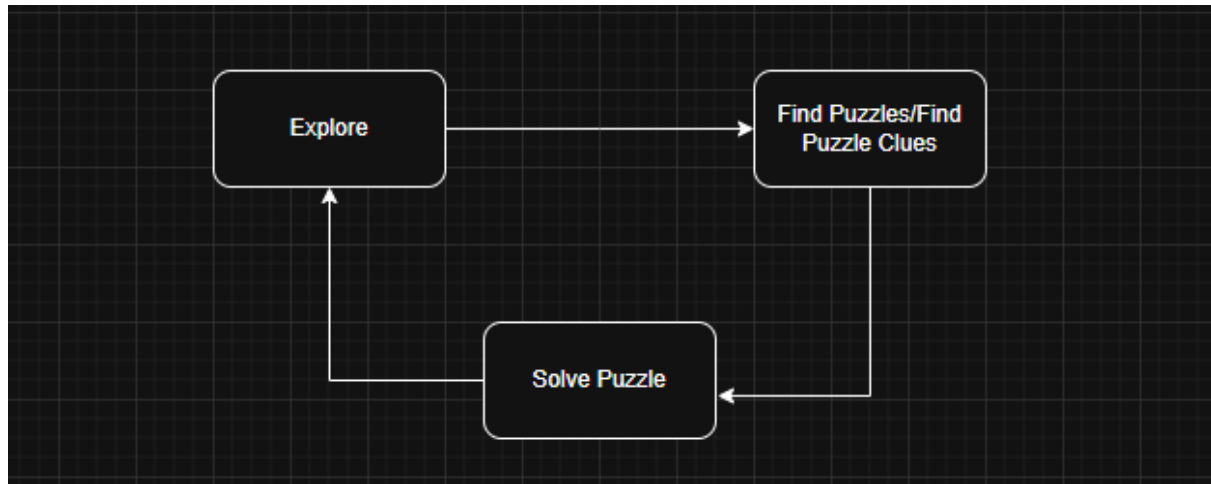

1. The player will find small pieces of torn paper hidden around the room, each with a different number written on it.
2. Once they find all the pieces of paper, the player will be able to determine the entire 4 digit code by joining the pieces together.

Outcome: By opening the safe with the correct combination, the player will find evidence that may lean towards either claim that the murder did or did not actually take place.

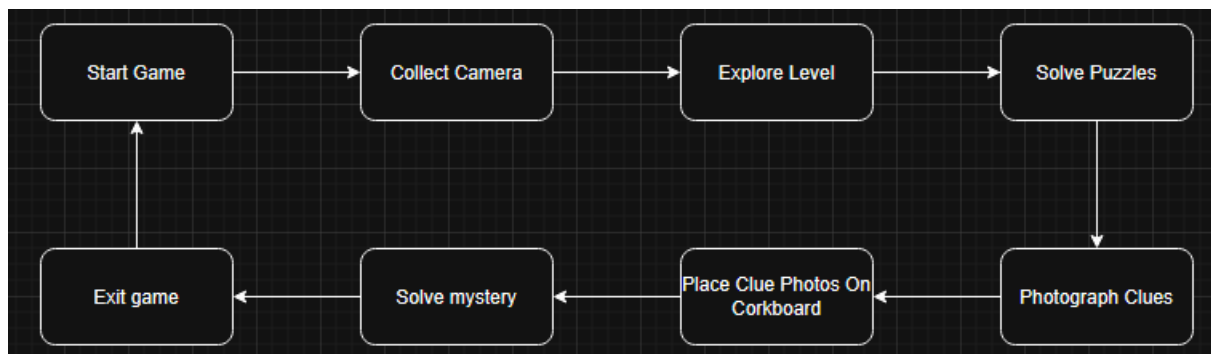

Reward: Clue 6 - Chemical Bottle, which initially appears to be some sort of cleaning agent, suggesting the killer tried to clean up their tracks i.e. clean up blood. This is key evidence that can be taken with the camera. The truth behind this bottle is that it is used as an ingredient to produce fake blood, which the player will learn in another part of the investigation.

6.0 Loops

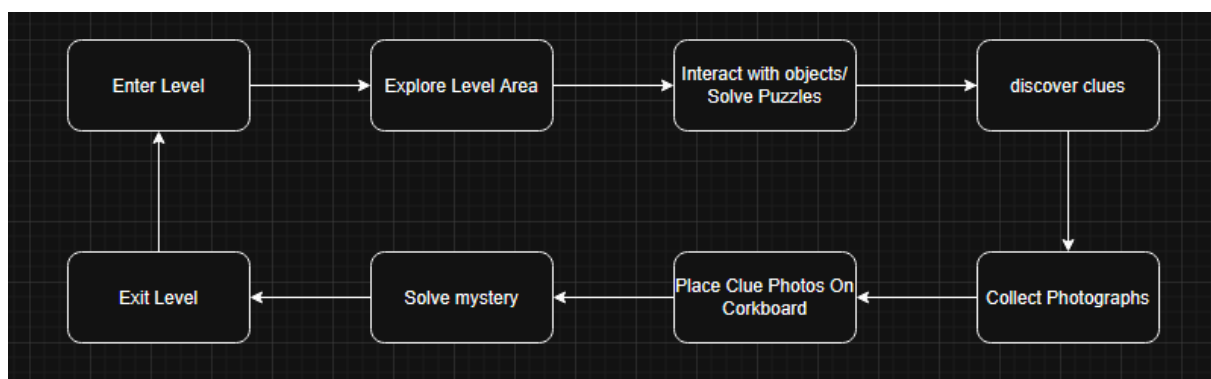

6.1 Core Loop

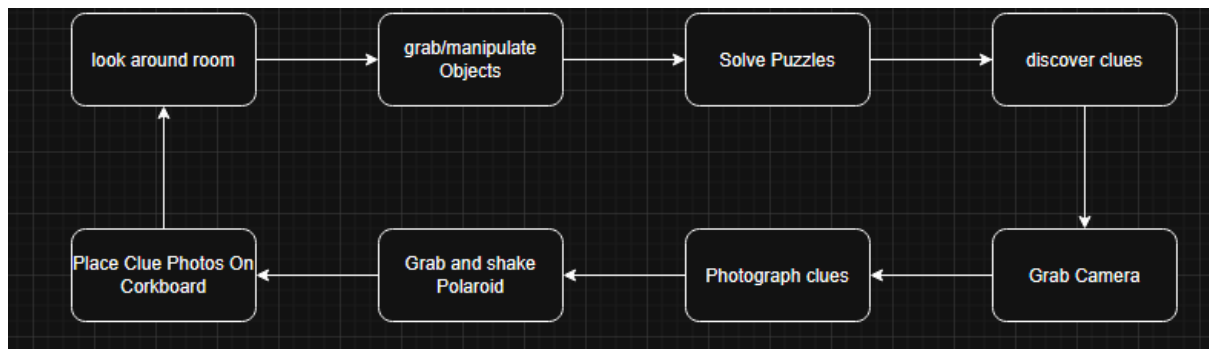

6.2 Session Loop

6.3 Level Loop

6.4 Moment-to-Moment Loop

7.0 UI/UX

7.1 Main Menu

The main menu will be digestible - inside a minimally-lit room with a brown desk, containing various documents. The document in the center of the desk is the Main Menu which includes a Start button and a Quit button. The player has a pointer on each controller to select an option.

Prototyped menu (Photoshop):

Final menu:

7.2 Pause Menu

Prototyped menu (Photoshop):

7.2.1 Overview

The pause menu aims to

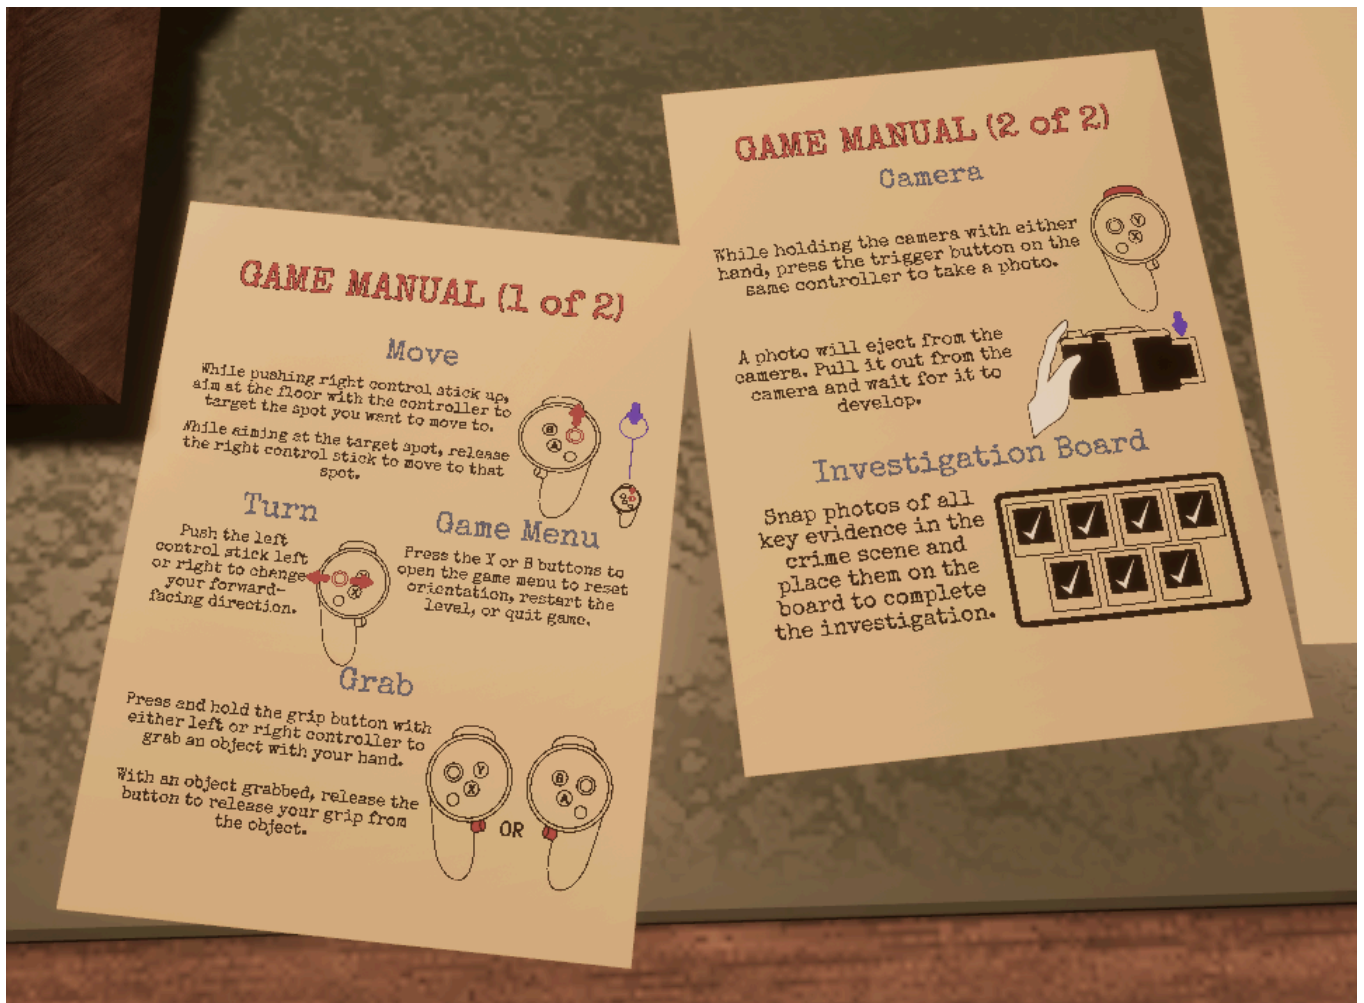

- be simplistic and digestible in 3D space
- Have a simple panel with three buttons (Resume, Settings, Exit)

- Be large enough for the player to read quickly
- Be easy to navigate with a VR remote

7.3 Game Manual

The game manual can be accessed in both the Main Menu and in the Main Level. This ensures that the player can read it as soon as possible without having to look for it in the Main Level first.

Game manual inside the Main Menu that can be seen in the Main Level too:

8.0 Art Design

8.1 Style Overview

Asset List - for the complete list see 13.3 Art Asset List in the Appendix

8.1.1 Style References

Mood Board

9.0 Sound Design/Music

9.1 Music

Music will be used in a digestible form, emitting from a radio.

The game will use jazz as its primary musical genre which aims to affect the atmosphere by:

- Contrasting the dark atmosphere by adding in a background groove, making the mood more eerie
- Expanding the 1950's setting - as jazz was prominent and most popular around this time period
- Bringing a 'detective' feel, as jazz is very closely associated with detective media, especially in the noir aesthetic.

Examples include:

- **Miles Davis - So What**
https://www.youtube.com/watch?v=y1Xk1LBvIqU&list=RDQMsBG_8yunXg0&index=4
- **Billie Holiday - Blue Moon**
https://www.youtube.com/watch?v=y4bZu56EylA&list=RDQMsBG_8yunXg0&index=7

9.2 Sound Design

The game will use SFX for the following actions:

- Inspecting
- Taking a photo
- Moving a film
- Crouching
- Walking

Action	File Name (wav)
Inspecting	inspection_0
Photo capture	capture_0
Moving a film	film_0
Crouching	crouch_0
Walking	walking_0
Music	

Jazz Song	music_0
-----------	---------

10.0 Project Overview

10.1 Overview

Prototyping will be inside of Unreal Engine 5, and will be serving as the backbone of the project.

The following items are to be completed before the final build:

- Basic VR mechanics
- Version control setup
- Greyboxed main room
- Complete GDD draft

10.2 Hardware / Software / Workspace Requirements

With the game being developed to be playable on Meta Quest 3 headsets as a benchmark, the following PC hardware requirements need to be met for testing and playing in VR iva Meta Quest Link:

Component	Minimum Specifications
Processor	Intel i5-4590/AMD Ryzen 5 1500X or greater
Graphics Card	NVIDIA GeForce GTX 1060 Desktop, 6GB
Memory	8GB+ RAM
Operating System	Windows 10, Windows 11
USB Ports	1x USB port

The game will be developed in Unreal Engine, therefore the software must be installed for developing, prototyping and testing. Perforce (P4V) will be used to manage version control for the Unreal Engine project files and various game assets.

For testing and playing in VR, some adequate room space is required to fully control VR and interact with the objects in the game. This may require allocating specific open space to turn and reach out with the player's arms freely.

10.3 Milestones

- Pre-production (13th June)
- Alpha (18th June)

- Beta (25th June)
- Gold (2nd July)
- Weekly client meetings on Tuesdays

10.3.1 Week 1 Pre-Production

In the initial week of pre-production we aim to get familiar with the team and start heavy concepting and brainstorming the game we want to make in the next 4 weeks.

10.3.2 Week 2 Alpha

The alpha build aims to have a fully functioning player character, camera with full functionality, fully functional instant film, interactable objects and some puzzle functionality. A grey-box prototype of the level must be near feature complete.

10.3.3 Week 3 Beta

The goal of the beta is to offer a more polished experience with all puzzles implemented, level fully blocked out, puzzles implemented, bug testing and art assets partially implemented.

10.3.4 Week 4 Gold

Further polished game with all art assets implemented, all mechanics in their complete state and major bugs fixed.

11.0 Limitations and Risks

11.1 Risks

Risk 1 - Reduced Timeframe for Artists

Artists have only 2 weeks in the development schedule to be caught up to speed with the game concept and contribute models and help polish the visuals of the game, risking the quality of the art direction or requiring us to go over schedule.

Risk 2 - Overscoping

Because of our limited time, we have a big risk of overscoping for a game we do not have the time to fully create. To reduce this, we should aim small, and not be afraid to cut things/downscale where possible.

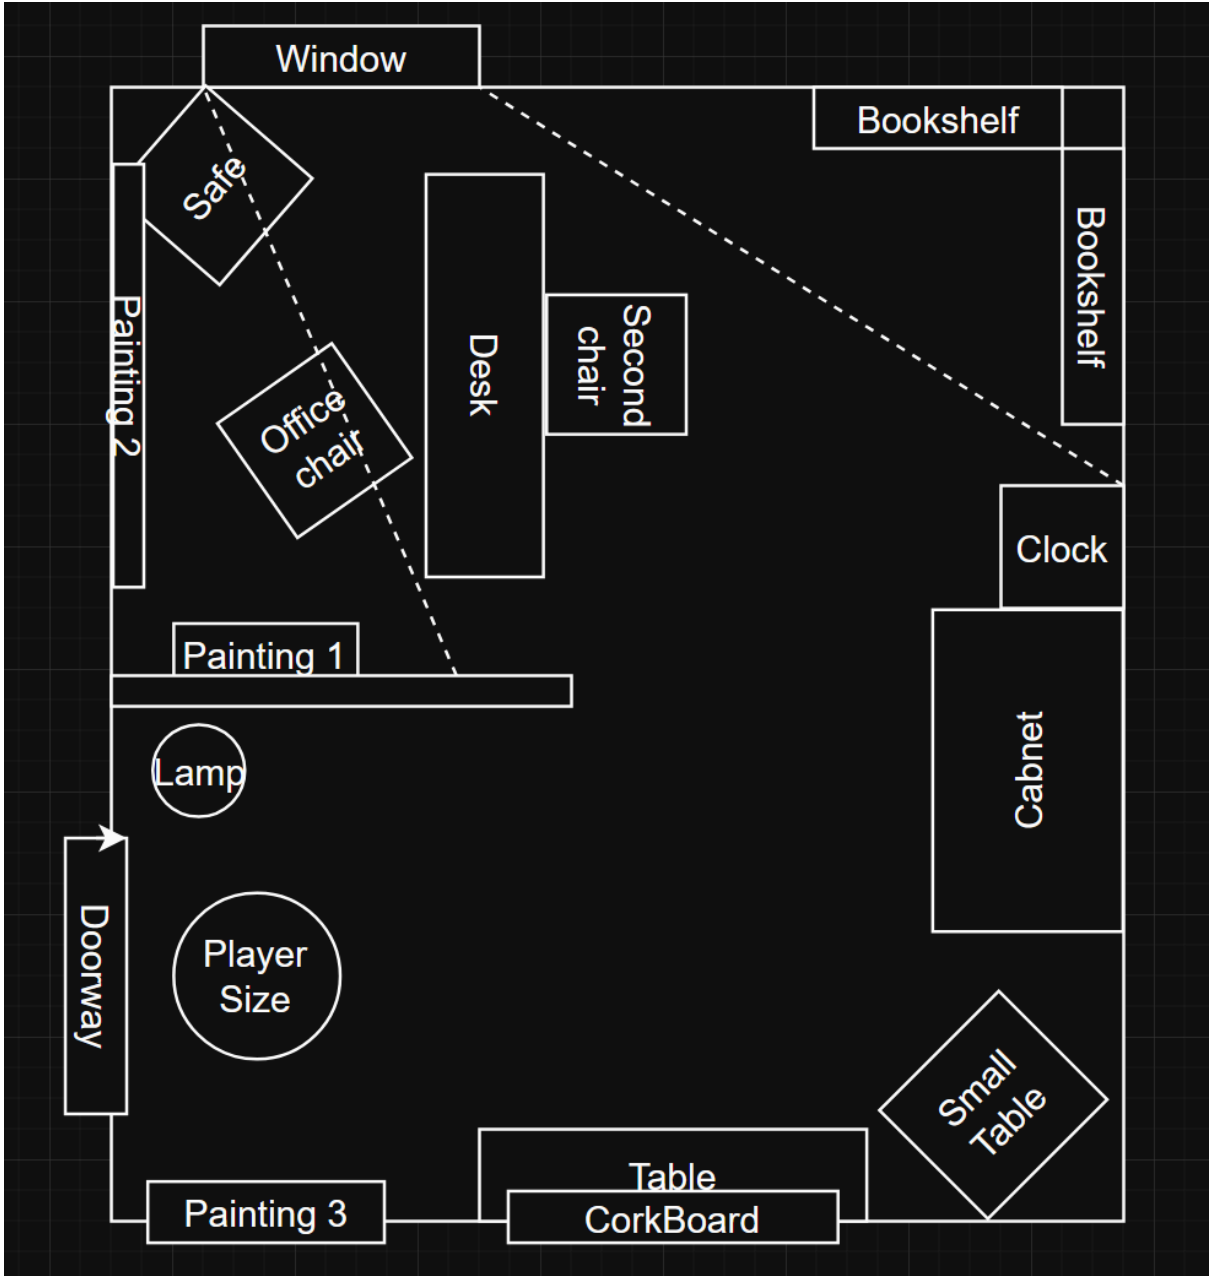

Risk 3 - Losing Work

When working in a team, and especially with a lot of people who may not be the most technical or familiar with using Unreal/Perforce,

there is a chance of losing work. To reduce this risk we should constantly save and back up our work on Perforce periodically, and to well inform our team of how to use the programs needed.

12.0 Level Design

12.1 Topographic Map

13.0 Appendix

13.1 Daily Scrum / Stand-Up

	Week 1		Week 2			Week 3			Week 4		
Name	Tuesday	Wednesday	Monday	Tuesday	Wednesday	Monday	Tuesday	Wednesday	Monday	Tuesday	Wednesday
Floyd Asuit	Brainstorming	Working on mood board, working on pitch	Discuss puzzle design, testing of VR movement mechanics, write up puzzle mechanics	Refine camera mechanics, decide on narrative direction change	Concepting puzzles, Reduced game scope i.e. removed features, simplified mechanics	Simplifying mechanics and updating them in GDD, ad-hoc QA testing in VR	On standby for QA testing Designing investigation board UI Finalise win condition parameters Set up test level for artists	QA Testing Standby Other: Starting individual report for VR assessment	QA Testing Other: Continue individual report for VR assessment	More QA Testing Other: Continue individual report for VR assessment	Write up game tutorial (simple)
Kaleb Harris	Brainstorming, GDD Formatting	Concepting, working on pitch	GDD Work, Engine Installation,			Completing Diagrams for GDD			Report work	Finalizing personal report Update GDD holes	GDD filling, scheduling and risk analysis

Naomi Kendall	Brainstorming	Concepting, set up trollo				Fill out puzzle section in GDD, solidify art asset list for artists, work on what bookshelf titles we need for bookshelf puzzle, allot of vr junk playtesting and working out how our game should work gameplay wise.	- Working with artists for our art assets - Actually playtesting in vr - Snoop on other teams - Add tasks and making sure our planner is up to date with what we're doing - Helping with level if needed - Working on those bookshelf titles. (Thomas took this)	Got sick 😞	Playtesting in VR, clean up gdd/make sure everythings in gdd fr, move tasks in planner board and check in on where each things are, do individual assessment.	Actually clean up GDD, PLAYTEST FINALLY, help with main menu ui shit and help out in engine where needed for team, start on individual report.	HELP POLISH LEVEL, Help playtest and get a build for the game. Help fix up main menu/become a programmer. Not start on individual report.(reverse psychology)
Thomas Randall	Brainstorming	Concepting more, filling out GDD, create art bible, working on pitch	Puzzle concepting, greyboxing	Level design - greyboxing	Level design - greyboxing Concepting	Greybox work, filling in holes in GDD, sound design?	Add specifics in Art Asset List for variants	Populate level with final models Expand 'Additional Asset Sheet'	Place more final models in level, start individual report	Start individual report, polish level	Start individual report, polish level, work on unfinished mechanics with programmers, finalise in-engine
Baiden Smith	Brainstorming	Concept			Locked Safe	Safe					

Ben Strebs-Stelps	Brainstorming								Sick		
Christopher Jones	Brainstorming		Polaroid Camera			Camera object detection					
Matthew Watkins	Brainstorming					Engine? Bookshelf mechanic / puzzle	Implement core loop	Implement core loop	testing	Finish bookshelf, that can be dragged in level now	
Van-Jordan Allen	Brainstorming					board					
Bryan Castillo	Brainstorming	Concept		Begin functionality to Menu UI		UI			Off on holiday		
Maya Marando						BOOK And autism				Books, paper and paper all textures (i'm losing it)	
Mercedes West-Sclick						Frames		Still book			

Sean Barratt						Safe, Wooden panel walls, beaker/fake bloodglass	Texture yesterdays models, Sort out desk with game designers, tall lamp, Spline mesh and texture for walls		Ceiling light, tall lamp, desk drawer texture	Desk drawer	Powerpoint, retopo
Joselyn Frank						Powerpoint [research report section & pre-production section]	Create a model for the oil-slick lamp	Start on the model for the telephone & continue work on oil-slick lamp	Continue work on the telephone's model	Make more progress on the telephone and hopefully get to texturing it, then work on the powerpoint	Powerpoint
Dominique Reich						Greyboxing & Camera concepts	Texturing		Working on other assets		

Nathan Bruno						knife	I would like confirm what artists have done and not done and who has done what. Come up with blood recipe Make shit bloody Hand prints Drag marks Torn cloths Bring knife into engine	Ill answer any artist questions	Finish and Bring dcals in to sceen and all other things i have	Finish the powerpoint	
Shane Worth						Key finalised, Clock blockout/details/texture and other assignment	Finish the gramophone and knob model/textures. Start trash can.	Gramophone, VR powerpoint	Start model for a table and finish my gramophone	Retopo Gramophone, VR powerpoint.	Texture gramophone
